We went to Saturn Friday past and test drove a 2005 V6 AWD, then the 2006 V6 AWD. We noticed that there was more wind noise upfront on the 2005 model, and a quieter ride on the 2006. The sales rep. stated that the reason for this quieter ride in the '06, was due to a thicker fire wall pad (probably due to complaints from 2005 or previous owners?).

Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption—the amount of fuel consumed in a given driving distance—because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.

For a century, almost all light-duty vehicles (LDVs) have been powered by internal combustion engines operating on petroleum fuels. Energy security concerns about petroleum imports and the effect of greenhouse gas (GHG) emissions on global climate are driving interest in alternatives. Transitions to Alternative Vehicles and Fuels assesses the potential for reducing petroleum consumption and GHG emissions by 80 percent across the U.S. LDV fleet by 2050, relative to 2005. This report examines the current capability and estimated future performance and costs for each vehicle type and non-petroleum-based fuel technology as options that could significantly contribute to these goals. By analyzing scenarios that combine various fuel and vehicle pathways, the report also identifies barriers to implementation of these technologies and suggests policies to achieve the desired reductions. Several scenarios are promising, but strong, and effective policies such as research and development, subsidies, energy taxes, or regulations will be necessary to overcome barriers, such as cost and consumer choice.

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

If you had time to slow down, you'd notice: You're more easily distracted lately. You forget the details of your life more often than you used to. You get easily agitated and have trouble resting, even though you're more tired than you remember ever being. Even your spiritual life is not immune: You struggle to pray, to read the Scriptures, to be still and know that God is God. Welcome to now. Our technology has greatly improved much of our lives, but in the process our brains are being rewired on a daily basis, and our capacity to be centered in our souls, in our lives, is at risk. Brain scientists are aware of this unprecedented change, but the solutions aren't found in science: They're found in the ancient practices of the faith. Tricia McCary Rhodes reintroduces us to the classic disciplines of Scripture reading, meditation, prayer, and contemplation, not just as technologies to aid our faith but as tools to keep us focused and mindful in an increasingly disorienting digital age.
