This is the first comprehensive introduction to the concepts, theories, and applications of pricing and revenue optimization. From the initial success of "yield management" in the commercial airline industry down to more recent successes of markdown management and dynamic pricing, the application of mathematical analysis to optimize pricing has become increasingly important across many different industries. But, since pricing and

revenue optimization has involved the use of sophisticated mathematical techniques, the topic has remained largely inaccessible to students and the typical manager. With methods proven in the MBA courses taught by the author at Columbia and Stanford Business Schools, this book presents the basic concepts of pricing and revenue optimization in a form accessible to MBA students, MS students, and advanced undergraduates. In addition, managers will find the practical approach to the issue of pricing and revenue optimization invaluable. Solutions to the end-of-chapter exercises are available to

Two brothers, who grew up in Boston, competed with each other in their respected fields of expertise. Myers, the older brother, was a genius in genetic engineering, and Phillip, the younger brother, was an archaeological genius in his own right. Each had two doctorate degrees from two different universities in Massachusetts. But Myers lost his job for improperly experimenting with special genetic engineering for which his

university disapproved. And he just couldn't stand the idea that his little brother was getting all the media attention after a discovery in Israel that could turn the entire religious world upside down. Although significant, Phillip decided to hide the proof of his discovery from the world. After all, he, too, wanted more proof so he would know for sure. Myers desperately wanted to prove to the world his genetic discovery was revolutionary. So he decided to try his genetic engineering theory out if only he could grab some of the fragments of proof Phillip secretly brought back from Israel.

Surface and Underground Excavations - Methods, Techniques and Equipment (2nd edition) covers the latest technologies and developments in the excavation arena at any locale: surface or underground. In the first few chapters, unit operations are discussed and subsequently, excavation techniques are described for various operations: tunnelling, drifting, raising, sinking, stoping,

quarrying, surface mining, liquidation and mass blasting as well as construction of large subsurface excavations such as caverns and underground chambers. The design, planning and development of excavations are treated in a separate chapter. Especially featured are methodologies to select stoping methods through incremental analysis. Furthermore, this edition encompasses comprehensive sections on mining at 'ultra depths', mining difficult deposits using non-conventional technologies, mineral inventory evaluation (ore - reserves estimation) and mine closure. Concerns over Occupational

Health and Safety (OHS), environment and loss prevention, and sustainable development are also addressed in advocating a solution to succeed within a scenario of global competition and recession. This expanded second edition has been wholly revised, brought fully up-to-date and includes (wherever feasible) the latest trends and best practices, case studies, global surveys and toolkits as well as questions at the end of each chapter. This volume will now be even more appealing to students in earth sciences, geology, and in civil, mining and construction engineering, to practicing

engineers and professionals in these disciplines as well as to all with a general or professional interest in surface and underground excavations.

Tunnelling has become a fragmented process, excessively influenced by lawyers' notions of confrontational contractual bases. This prevents the pooling of skills, essential to the achievement of the promoters' objectives. Tunnelling: Management by Design seeks the reversal of this trend.
