This book examines the effects of alcohol on gender relations in traditional Europe, focussing on England, France, and Italy in the late medieval and early modern periods, roughly 1300 to 1700. While alcohol causes physiological changes that are scientifically verifiable, the work of anthropologists reveals that much of what passes for drinking behavior and drunken comportment varies from one society to the next. In traditional Europe, as in modern Western societies, drinking led to increased sexual activity for both men and women, and it inclined men to commit acts of violence. Despite male fears of female sexuality and despite patriarchal restraints, women still consumed alcoholic beverages, sometimes in gargantuan amounts. This widespread consumption of wine, ale, or beer illustrates the importance of alcohol in traditional Europe. Alcohol was the ubiquitous social lubricant, and alcoholic beverages formed an important part of most people's diets.

This book examines drinking and attitudes to alcohol consumption in late medieval and early modern England, France, and Italy, especially as they related to sexual and violent behavior and to gender relations. According to widespread beliefs, the consumption of alcohol led to increased sexual activity among both men and women, and it also led to disorderly conduct among women and violent conduct among men. Dr Lynn shows how alcohol was a fundamental part of the diets of most people, including women, resulting in daily drinking of large amounts of ale, beer, or wine. This study offers an intimate insight into both the altered states induced by alcohol, and, by opposition, into normal relations in family, community, and society.

Alcohol is a killer—1 of every 13 deaths in the United States is alcohol-related. In addition, 5 percent of the population consumes 50 percent of the alcohol. The authors take a close look at the problem in a "classy little study," as The Washington Post called this book. The Library Journal states, ". . . [T]his is one book that addresses solutions. . . . And it's enjoyably readable. . . . This is an excellent review for anyone in the alcoholism prevention business, and good background reading for the interested layperson." The Washington Post agrees: the book ". . . likely will wind up on the bookshelves of counselors, politicians, judges, medical professionals, and law enforcement officials throughout the country."

Hailed an immediate classic of Finnish literature on its publication in 1978 and an international bestseller that has been translated into 19 languages, Märta Tikkanen's verse novel is a haunting, profoundly evocative portrait of one woman's fraught relationship with her alcoholic husband, inspired by the author's own experience. In language that is as delicate as it is fierce, Tikkanen explores the depths of fear and violence that often accompany addiction and the struggle to reconcile that pain with the deep love and strength necessary to hold a family together through it all. As much a story of resilience as it is suffering, The Love Story of the Century is a bittersweet account of the complexities of addiction, the power of creativity, and the redemption of love.

Alcohol use by young people is extremely dangerous - both to themselves and society at large. Underage alcohol use is associated with traffic fatalities, violence, unsafe sex, suicide, educational failure, and other problem behaviors that diminish the prospects of future success, as well as health risks á€” and the earlier teens start drinking, the greater the danger. Despite these serious concerns, the media continues to make drinking look attractive to youth, and it remains possible and even easy for teenagers to get access to alcohol. Why is this dangerous behavior so pervasive? What can be done to prevent it? What will work and who is responsible for making sure it happens? Reducing Underage Drinking addresses these questions and proposes a new way to combat underage alcohol use. It explores the ways in which may different individuals and groups contribute to the problem and how they can be enlisted to prevent it. Reducing Underage Drinking will serve as both a game plan and a call to arms for anyone with an investment in youth health and safety.

This book is the product of a multinational research project on "Gender, Alcohol and Culture: an International Study" (GENACIS). GENACIS is a major collaborative effort to highlight the relationship between gender and alcohol issues, seek greater understanding of male and female differences in patterns of drinking and alcohol problems, and assess the public health implications of drinking by men and women. Each of the eight country-specific chapters in this volume (Argentina, Brazil, Costa Rica, India, Mexico, Nigeria, Sri Lanka, Uganda) consists of a review of alcohol and alcohol policy in the country and an analysis of social and health problems associated with drinking. For several of the countries, this is the first systematic attempt to provide a broad insight into gender issues and how they relate to alcohol problems. In an era of growing consumption and increasing burden of alcohol-related problems in many developing countries, the findings reported in this book and the GENACIS project in general, are a major step forward in the understanding of the role of gender in alcohol behaviours.

American historians will find this study both enlightening and surprising.

In this original examination of alcohol production in early America, Sarah Hand Meacham uncovers the crucial role women played in cidering and distilling in the colonial Chesapeake. Her fascinating story is one defined by gender, class, technology, and changing patterns of production. Alcohol was essential to colonial life: the region's water was foul, milk was generally unavailable, and tea and coffee were far too expensive for all but the very wealthy. Colonists used alcohol to drink, in cooking, as a cleaning agent, in beauty products, and as medicine. Meacham finds that the distillation and brewing of alcohol for these purposes traditionally fell to women. Advice and recipes in such guidebooks as The Accomplish'd Ladies Delight demonstrate that women were the main producers of alcohol until the middle of the 18th century. Men, mostly small planters, then supplanted women, using new and cheaper technologies to make the region's cider, ale, and whiskey. Meacham compares alcohol production in the Chesapeake with that in New England, the middle colonies, and Europe, finding the Chesapeake to be far more isolated than even the other American colonies. She explains how home brewers used new technologies, such as small alembic stills and inexpensive cider pressing machines, in their alcoholic enterprises. She links the importation of coffee and tea in America to the temperance movement, showing how the wealthy became concerned with alcohol consumption only after they found something less inebriating to drink. Taking a few pages from contemporary guidebooks, Every Home a Distillery includes samples of historic recipes and instructions on how to make alcoholic beverages. American historians will find this study both enlightening and surprising.

According to the popular press in the mid twentieth century, American women, in a misguided attempt to act like men in work and leisure, were drinking more. "Lady Lushes" were becoming a widespread social phenomenon. From the glamorous hard-drinking flapper of the 1920s to the disgraced and alcoholic wife and mother played by Lee Remick in the 1962 film "Days of Wine and Roses," alcohol consumption by American women has been seen as both a prerogative and as a threat to health, happiness, and the social order. In Lady Lushes, medical historian Michelle L. McClellan traces the story of the female alcoholic from the late-nineteenth through the twentieth century. She draws on a range of sources to demonstrate the persistence of the belief that alcohol use is antithetical to an idealized feminine role, particularly one that glorifies motherhood. Lady Lushes offers a fresh perspective on the importance of gender role ideology in the formation of medical knowledge and authority.
