Provides an introduction to business functions, issues and activities and to the way they interact with their environment. It is the core text for the Business In Context Series which serves as a stand-alone introduction to business studies. An ELBS/LPBB edition is available.

This new edition of Organisations and the Business Environment provides a completely revised, extended and updated edition of the original successful text. It provides contemporary and comprehensive coverage of the subject matter which is highly relevant to business and management students at undergraduate, postgraduate and professional levels. The text is written in a clear and concise style, illustrated with topical examples and data. Organisations and the Business Environment (second edition) comprises four sections: \* Business Organisations IV discusses the evolution of organisational and managerial theories and concepts with particular emphasis on their relevance in the 21st century. The different types of organisations and their missions, visions, goals and objectives are examined. \* The External Business Macro-Environment IV describes and considers the political, economic, socio-cultural, technological, ecological and legal influences on organisations, utilizing the PESTEL framework of analysis. This section includes a review of the internationalization of businesses and examines the role of GATT and the WTO, single markets and trading blocs. \* The External Business Micro-Environment IV provides a review of the market system and the nature of supply and demand. Market structures are examined in the light of monopolistic regimes and working for competitive advantage. The impact of government intervention is explored via regulatory bodies, privatization, and nationalization programmes. \* Business Management IV explores the major aspects of contemporary business organisations, including corporate governance and business ethics. In particular, this section tackles the areas of structure, culture, change, quality management and the principal functions of organisations. This textbook is a user-friendly resource with end of chapter questions, activities and assignments to consolidate learning. How do the attitudes people bring with them to the workplace-attitudinal baggage-affect thoughts, feelings, and actions in organizations? How are the attitudes of those outside an organization (stockholders, customers, suppliers, government officials, and the public-at-large) affected by the organization? Attitudes In and Around Organizations provides a concise summary of what we know about attitudes and suggests what we might discover by adopting novel means, both conceptual and methodological, for studying attitudes in and around organizations. Arthur P. Brief provides an overview of the job satisfaction literature, including a redefinition of job satisfaction. In addition, he examines the various means by which attitudes have been measured, attitude formation and change, and the resistance of attitudes to change efforts. Groups whose attitudes are organizationally relevant (customers, for example) are examined in order to illustrate how organizations affect the attitudes of people beyond their boundaries and to determine how organizations can influence salient attitudes in their environments. The concluding chapter offers the reader a view of the future and suggests ideas for future research. Students, researchers, consultants, and organizational decision makers will find this a relevant, engaging, and thought-provoking resource.

Baumer and Poindexter's, Legal Environment of Business in the Information Age, 1e, is the legal environment text for the 21st century. In the next few years, many of the laws that comprise the legal environment of business will change, and the pace of the change is likely to be quick. Because of the growth of information technology, many legal issues have emerged and are occupying center stage. Baumer/Poindexter targets future managers who will be dealing with information technology in some way, and reinforces the latest trends in business education by providing a similar experience with law. Legal Environment of Business in the Information Age places an emphasis on the manner in which regulatory law deals with changes in technology, and devotes significantly more attention to E-Commerce contract law and legal protection of intellectual property.

In a turbulent business environment, leaders must begin to think more broadly about what a corporation is and how it can create a richer future. With the globalisation of the world's economies, the intensification of competition, and quantum leaps in technological development, the insular and static strategic thinking of many global corporations has become inadequate for understanding the business environment and determining strategic direction. This 2006 book provides comprehensive and practical analysis of what sustainable business development (SBD) is and how companies can use it to make a significant difference. Case studies of companies in the US, Europe, the Pacific Rim and South America demonstrate that achieving innovation and integration depends on a comprehensive understanding of all of the forces which drive change and responding to them with fresh ways of strategic thinking. It is compulsory reading for MBA students and executives as well as professional readers.
