Booming Mainland Chinese outbound travel is one of the most exciting phenomena in the world tourism industry's recent history. From 2000 to 2010, Chinese outbound travel increased at a compounded annual rate of 18.5 percent, and it is forecasted that by 2020 China will generate approximately 100 million outbound trips a year, making China the fourth largest source of outbound travel in the world. The new Chinese tourists are more confident, technologically savvy, value conscious, and ready to explore unfamiliar territory. For tourism marketers and researchers who are getting ready to or just celebrated their initial "west-meets-east" moments, the new Chinese tourists are showing up at their doors and presenting new challenges for marketing and service. In this book, leading authors from around the world share their most cutting-edge findings and thoughts on the Chinese outbound travel market. The book reflects on the paths of the Chinese outbound travel development, reports new trends and issues, and provides new insights and recommendations. For practitioners around the world (e.g., destination policymakers and marketers, travel and tourism service providers, owners, and managers), this book provides hands-on guidance on understanding tourists from Mainland China. For tourism scholars, educators, and students, this book provides basic yet essential knowledge on the Chinese outbound travel market and tourist behavior and points out important future directions. Most tourism programs today have an international component in their curriculum, usually including a global tourism class. This book serves as an excellent supplemental reading for students in these classes.

These guidelines from the China Tourism Academy and UNWTO offer valuable insights into the factors motivating Chinese tourists to travel. It also presents a valuable toolkit to guide destination managers and decision makers on the best way to tap into this lucrative and productive market.

The topics studied in this Special Issue include a wide range of areas in finance, economics, tourism, management, marketing, and education. The topics in finance include stock market, volatility and excess returns, REIT, warrant and options, herding behavior and trading strategy, supply finance, and corporate finance. The topics in economics including economic growth, income poverty, and political economics.

This book covers technologies that pose new challenges for consumer policy, creative developments that can help protect consumers economic interests, innovative approaches to addressing perennial consumer concerns, and the challenges entailed by emerging ways of creating and delivering consumer products and services. In addition, it reflects on past successes and failures of consumer law and policy, explores opportunities for moving consumer law in a different direction, and discusses potential threats to consumer welfare, especially in connection with the changing political landscape in many parts of the world. Several chapters examine consumer law in individual countries, while others have an international focus.

The People's Republic of China has changed from a country which actively discouraged tourism into one of the major source markets for the international industry; the 35 million Chinese travelling across the border in 2005 are merely the tip of the iceberg. China's Outbound Tourism is the first book on this major development and has been written using a multitude of sources from China and around the world. The topic is approached from many angles, using methods from the fields of economics, political sciences, sociology and cross-cultural studies. The book explains the economic and social background of the surge in tourism and the changes in policy in the country since 1949, when it moved from prevention through controlled development to encouragement of outbound travels. Throughout the book, facts and figures are given for the global development as well as in-depth information about China's key destinations. The growing importance of tourists from China is however not just a question of quantity; the text explains the features which distinguish their travel motivations and behaviours from 'western' and Japanese tourists, and the consequences for product adaptation and marketing methods for destinations interested in attracting and satisfying Chinese tourists. Arif's groundbreaking book cannot be ignored by professionals, academics and students of tourism and leisure; it offers fresh insight into the topic and indicates some of the future lines of development in this area.

Covering a wide range of current issues, this comprehensive Handbook explores the links between tourism as a dynamic tertiary industry and China as the world's most influential tourism market and destination.

This book analyzes a broad variety of tourism products in China, Asia and Europe that employ both cutting-edge IT technologies and advanced methodologies. These products are cultural tourism, recreational tourism, sport tourism, adventure tourism, medical tourism and more. Authors from different areas contributed to the book, including academic researchers, graduate students, government administrators and industry practitioners. The book covers the entire chain of tourism product business processes: product development and improvement, tourist behavior analysis, marketing and sales, customer service, etc. In addition, it addresses related issues such as tourism sustainability, policymaking, environmental protection and human resource development. Big data processing, data mining, visual content analysis and textual content analysis, semantic nets and sentiment analysis are among the cutting-edge technological tools used to study tourism product development here. The book gathers selected papers from the 9th International Conference on Tourism and Hospitality between China and Spain ([www.china-spain.org](http://www.china-spain.org)) with participants from 18 countries. Though the book is mainly intended for researchers and policymakers, it will also appeal to a wider audience, due to its first-hand content, insightful analysis and broad geographic coverage.

Geographic space is a fundamental and essential construct of the physical reality within which we live, move, and construct our world. Through space we create 'others' (anything that is any distance from 'us') and we experience time (by moving from one place point to another). Because it is so fundamental to our experience, we often take geographic space for granted. Tourism Spaces: Environments, Locations, and Movements shows some of the ways that geographers and other social scientists bring spatial considerations to the forefront of our research and understanding of tourism. This is seen through the spatial arrangements and distributions of tourism phenomena, such as attractions, destinations, and in the spatial behaviour of tourists themselves. Today, these spatial arrangements and patterns are increasingly being captured, analysed, and understood through various forms of formal and informal digital data. The chapters in this book were originally published as a special issue of Tourism Geographies.

Tour guides, a highly responsible group of professionals who are in direct communication with tourists traveling around the world, have a great impact on the proper promotion of the culture of countries, global peace, and tolerance. Additionally, they are also effective in the preservation of world natural heritage. Thus, the educational and ethical status of tour guides, as well as the characteristics and ethical values that they should possess, need to be examined on an international scale. In today's world, where tourism demand is directed towards all types of tourism, practices in special interest tourism should be customized in order to ensure the highest level of service quality and cultural appreciation. Cases on Tour Guide Practices for Alternative Tourism provides emerging research exploring the theoretical and practical aspects of the occupational issues that surround tour guides and their applications within international tourism. Featuring coverage on a broad range of topics such as cultural education, specialized learning, and international business, this book is ideally designed for tour guides, travel agencies, tour managers, tour developers, heritage sites, museums, academicians, researchers, students, industry experts, and hospitality professionals.

Today, tourism is an important component of development, not only in economic terms but also for knowledge and human welfare. Tourism today is an activity accessible to a growing number of people. The phenomenon has many more advantages than disadvantages. New forms of economic development and increasing wealth of human societies depend on tourism. Our knowledge of the world now includes a strong component due to tourism. Human welfare has physiological and psychological elements, which tourism promotes, both because of the enjoyment of knowing new territories and increasing contacts with near or far away societies and cultures. The tourism industry has nevertheless given rise to some serious concerns, including social costs and ecological impacts. Many ancient local cultures have practically lost their identity. Their societies have orientated their economy only to this industry. Both the natural and cultural **rural or urban** **landscapes** have also paid a high price for certain forms of tourism. These problems will persist if the economic benefit is the only target, leading to economic gains that eventually become ruinous. It is also important to consider that visitors nowadays are increasingly demanding in cultural and environmental terms. Never before have transport and communication links been so important as today. Natural ecosystems are now a rarity on the planet and ecologists talk today about (socio-ecosystems). Given this, tourism and environmental education are facing a major challenge. Tourism also plays an important role in the natural environmental changes that are strongly affected by technological and social developments. Natural changes are inherent in the Earth's ecosystem (the **ecosphere**). Also, technological and social changes are inherent to mankind (the **noosphere**) and are now becoming widespread. Cities are growing rapidly and industry requires increasingly larger areas. Many traditional rural areas are being abandoned. However, many historic agricultural districts have maintained, or even recovered, their local population numbers through intelligent strategies of tourism focused on nature and rural culture. Natural landscapes and biodiversity are becoming increasingly appreciated. The tourism industry must be able to respond to these aspirations. The 9th International Conference on Sustainable Tourism had the aim of finding ways to protect the natural and cultural landscape through the development of new solutions which minimise the adverse effects of tourism. A selection of the papers presented at the meeting form this volume.
