This book is a companion text to Orthopedic Rehabilitation, Assessment, and Enablement by the same author, but can be used independently. Through real life examples, it illustrates the rehabilitation ideas and principles taught in the companion text, ranging from conditions seen daily by the orthopedic surgeon or primary care physician to more challenging conditions. It also covers newer paradigm shifts in the management of osteoporosis and new technologies. In addition, the book highlights the uses of the computers and virtual reality in the field of orthopedic surgery. Coverage ends by stressing the importance of tele-rehabilitation.

Comprised exclusively of clinical cases presenting injuries to and management of the rotator cuff, this concise, practical casebook will provide orthopedic surgeons with the best real-world strategies to properly manage the various kinds of cuff injury they may encounter. Each chapter is a case that opens with a unique clinical presentation, followed by a description of the diagnosis, assessment and management techniques used to treat it, as well as the case outcome, literature review and clinical pearls and pitfalls. Cases included illustrate different management strategies for rotator cuff surgery, including arthroscopic repair for tendonitis and tears, open and mini-open repair for severe tears, latissimus dorsi and pectoralis tendon transfer, arthroscopic debridement, hemiarthroplasty and total reverse arthroplasty, biological augmentation, and revision repair after retear and infection. Pragmatic and reader-friendly, Rotator Cuff Injuries: A Clinical Casebook is an excellent resource for orthopedic surgeons and sports medicine specialists confronted with both common and complex injuries to the rotator cuff.

MULTI-SECTOR CASEBOOK IN HEALTH ADMINISTRATION, LEADERSHIP, AND MANAGEMENT is a thought-provoking introduction to modern health management and leadership through a compelling collection of cases based on real-world scenarios. The selected cases cover a wide range of important issues faced by public, non-profit, and for-profit organizations, providing you with a broad, highly practical overview of situations, roles, and responsibilities you may encounter in your professional career. Key topics include quality improvement, leadership, strategic planning, budgeting, organizational behavior and change, human resources, systems thinking, decision making and analysis, working with the public, boards and governance, and legal and ethical issues. This diverse material is presented using a strong, consistent case structure to help readily assess the principles involved, apply critical thinking, and demonstrate and deepen their understanding through discussion or exercises. Perfect as a complement to classroom work or a tool for self-study, this excellent casebook is a must-have resource for current and future health management and public health professionals, Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Casebook of Clinical Neuropsychology features actual clinical cases drawn from leading experts in the

Download File PDF Casebook Of Orthopedic Rehabilitation Including Viri Reality

field.

Formal training in clinical neuropsychology introduces trainees to diverse patient populations with a variety of conditions and disorders. Learning to competently apply a structured, fact-finding approach to case conceptualization, differential diagnosis, and treatment planning is an essential goal at all levels of training. This approach provides a valuable exercise and method of examining practitioner competence. The structured approach to case analysis promotes good clinical decision making, and exercises based on such an approach can help prepare clinicians for the oral exams that are a part of board certification. The Neuropsychology Fact-Finding Casebook is a resource for both supervisors and trainees in clinical neuropsychology, as well as for clinicians preparing for board certification. The volume provides 24 compelling and diverse fact-finding cases, one for each month of a two-year residency. Each case is presented in a stepwise fashion: presenting problem and referral question, background information and patient report, behavioral observations, and test findings. At the end of each case, a summary, diagnostic impression, recommendations, and questions are provided to assess, reinforce, and teach core competencies; an outcome section describes what occurred after the full case evaluation is completed; and critical teaching points are discussed. This Casebook is a standardized approach to fact-finding that training programs at various levels can use to help trainees develop such evaluation skills.

The Casebook of Psychosomatic Medicine brings to life the patients whom psychosomatic medicine serves and the variety of challenges they face -- classic psyche--soma involvement; psychotic attributions to physical illness; catastrophic events and injuries; major systemic medical challenges with comorbid psychopathology; and more.

Clinical neuropsychologists frequently evaluate individuals within a forensic context, and therefore must address questions regarding the possible presence of reduced effort, response bias and/or malingering. This volume offers a wide range of instructive real-world case examples involving the complex differential diagnosis where symptom exaggeration and/or malingering cloud the picture. Written by expert forensic neuropsychologists, the scenarios described provide informed, empirically-based and scientifically-derived opinions on the topic. Issues related to malingering, such as response bias and insufficient effort, are discussed thoroughly with regard to a large number of clinical conditions and assessment instruments. Test data and non-test information are considered and integrated by the numerous experts. Expert guidance for clinicians who must address the issue of malingering is provided in a straightforward and well-organized format. To date, there has not been a comparable collection of rich case material relevant to forensic practice in clinical neuropsychology.

Ambulatory Medicine Case Book is a practical resource for internal medicine and family medicine residents who are now required to spend at least 33% of their training in an ambulatory setting. In addition, the book provides a useful clinical guide for primary care practitioners as it reviews many of the clinical problems encountered in an ambulatory practice. The cases present evidence-based and cost-effective recommendations while acknowledging important issues such as patient preference.
