Chemistry, science, stoichiometry, thermodynamics, organic chemistry.

By Joseph Topich, Virginia Commonwealth University. This manual for students contains solutions to selected all in-chapter problems and even-numbered end-of-chapter problems.

Chemistry, Third Edition, by Julia Burdge offers a clear writing style written with the students in mind. Julia uses her background of teaching hundreds of general chemistry students per year and creates content to offer more detailed explanation on areas where she knows they have problems. With outstanding art, a consistent problem-solving approach, interesting applications woven throughout the chapters, and a wide range of end-of-chapter problems, this is a great third edition text.

Chemistry provides a robust coverage of the different branches of chemistry - with unique depth in organic chemistry in an introductory text - helping students to develop a solid understanding of chemical principles, how they interconnect and how they can be applied to our lives. "Covers Physical Chemistry in an accessible format for first years...good for covering the gap between varied levels of knowledge from different schools' curricula and the mcuh more demanding University courses." - Dr Ritu Katak, DEPT OF CHEMISTRY, UNIVERSITY OF DURHAM

Selected by the Modern Library as one of the 100 best nonfiction books of all time From the Modern Library ' s new set of beautifully repackaged hardcover classics by Truman Capote—also available are *Breakfast at Tiffany ' s* and *Other Voices, Other Rooms* (in one volume), *Portraits and Observations*, and *The Complete Stories* Truman Capote ' s masterpiece, *In Cold Blood*, created a sensation when it was first published, serially, in *The New Yorker* in 1965. The intensively researched, atmospheric narrative of the lives of the Clutter family of Holcomb, Kansas, and of the two men, Richard Eugene Hickock and Perry Edward Smith, who brutally killed them on the night of November 15, 1959, is the seminal work of the " new journalism. " Perry Smith is one of the great dark characters of American literature, full of contradictory emotions. " I thought he was a very nice gentleman, " he says of Herb Clutter. " Soft-spoken. I thought so right up to the moment I cut his throat. " Told in chapters that alternate between the Clutter household and the approach of Smith and Hickock in their black Chevrolet, then between the investigation of the case and the killers ' flight, Capote ' s account is so detailed that the reader comes to feel almost like a participant in the events.

The second edition of "Analytical Methods in Supramolecular Chemistry" comes in two volumes and covers a broad range of modern methods and techniques now used for investigating supramolecular systems, e. g. NMR spectroscopy, mass spectrometry, extraction methods, crystallography, single molecule spectroscopy, electrochemistry, and many more. In this second edition, tutorial inserts have been introduced, making the book also suitable as supplementary reading for courses on supramolecular chemistry. All chapters have been revised and updated and four new chapters have been added. A must-have handbook for Organic and Analytical Chemists, Spectroscopists, Materials Scientists, and Ph.D. Students in Chemistry. From reviews of the first edition: "This timely book should have its place in laboratories dealing with supramolecular objects. It will be a source of reference for graduate students and more experienced researchers and could induce new ideas on the use of techniques other than those usually used in the laboratory." *Journal of the American Chemical Society* (2008) VOL. 130, NO. 1 doi: 10.1021/ja0769649 "The book as a whole or single chapters will stimulate the reader to widen his horizon in chemistry and will help him to have new ideas in his research." *Anal Bioanal Chem* (2007) 389:2039-2040 DOI: 10.1007/s00216-007-1677-1

"General Chemistry: Atoms First," Second Edition starts from the building blocks of chemistry, the atom, allowing the authors to tell a cohesive story that progresses logically through molecules and compounds to help students intuitively follow complex concepts more logically. This unified thread of ideas helps students build a better foundation and ultimately gain a deeper understanding of chemical concepts. Students can more easily understand the microscopic-to-macroscopic connections between unobservable atoms and the observable behavior of matter in daily life, and are brought immediately into real chemistry instead of being forced to memorize facts. Reflecting a true atoms first perspective, the Second Edition features experienced atoms-first authors, incorporates recommendations from a panel of atoms-first experts, and follows historical beliefs in teaching chemistry concepts based and real experimental data first. This approach distinguishes this text in the market based whereby other authors teach theory first, followed by experimental data.

Metal clusters are on the brink between molecules and nanoparticles in size. With molecular, nano-scale, metallic as well as non-metallic aspects, metal clusters are a growing, interdisciplinary field with numerous potential applications in chemistry, catalysis, materials and nanotechnology. This third volume in the series of hot topics from inorganic chemistry covers all recent developments in the field of metal clusters, with some 20 contributions providing an in-depth view. The result is a unique perspective, illustrating all facets of this interdisciplinary area: \* Inter-electron Repulsion and Irregularities in the Chemistry of Transition Series \* Stereochemical Activity of Lone Pairs in Heavier Main Group Element Compounds \* How Close to Close Packing? \* Forty-Five Years of Praseodymium Diodide \* Centered Zirconium Clusters \* Titanium Niobium Oxychlorides \* Trinuclear Molybdenum and Tungsten Cluster Chalcogenides \* Current State of (B,C,N)-Compounds of Calcium and Lanthanum \* Ternary Phases of Lithium with Main-Group and Late-Transition Metals \* Polar Intermetallics and Zintl Phases along the Zintl Border \* Rare Earth Zintl Phases \* Structure-Property Relationships in Intermetallics \* Ternary and Quaternary Niobium Arsenide Zintl Phases \* The Building Block Approach to Understanding Main-Group-Metal Complex Structures \* Cation-Deficient Quaternary Thiospinels \* A New Class of Hybrid Materials via Salt Inclusion Synthesis \* Layered Perrhenate and Vanadate Hybrid Solids \* Hydrogen Bonding in Metal Halides \* Syntheses and Catalytic Properties of Titanium Nitride Nanoparticles \* Solventless Thermolysis \* New Potential Scintillation Materials in Borophosphate Systems. With its didactical emphasis, this volume addresses a wide readership, such that both students and specialists will profit from the expert contributions.
