Grounded theory methodology and procedure have become one of the most influential modes of carrying out qualitative research when generating theory is a principle aim of the researcher. This volume presents a series of readings that emphasize different aspects of grounded theory methodology and methods. The selections are written by former students of the late Anselm Strauss and have been chosen for their accessibility and range.

Grounded theory is the most popular genre of qualitative research used in the health professions and is widely used elsewhere in the research world. In this volume, six key grounded theory methodologists examine the history, principles,

and practices of this method, highlighting areas in which different strands of the methods diverge. Chapters cover the work of Anselm Strauss, Barney Glaser, Leonard Schatzman, and the postmodern and constructivist schools. Dialogues between the participants sharpen the debate and show key topics of agreement and disagreement. This volume will be ideal for courses on grounded theory that wish to show the ways in which it can be used in research studies.

There comes a time in all research when collected data must be analysed and interpreted. This volume presents practical procedures and techniques for doing grounded theory studies at a level accessible to students and researchers in applied disciplines. It provides a step by step approach to doing research from formulation of the initial research question, through various systems of coding and analysis, to the process of writing or speaking on the research topic. It will be an invaluable tool for the novice researcher and a useful text for courses in qualitative research in social science programmes.

This edited three volume edition brings together significant papers previously published in the Journal of Information Technology (JIT) over its 30 year publication history. The three volumes of Enacting Research Methods in Information Systems celebrate the methodological pluralism used to advance our understanding of information technology's role in the world today. In addition to quantitative methods from the positivist tradition, JIT also values methodological articles from critical research perspectives, interpretive traditions, historical perspectives, grounded theory, and action research and design science approaches. Volume 1 covers Critical Research, Grounded Theory, and Historical Approaches. Volume 2 deals with Interpretive Approaches and also explores Action Research. Volume 3 focuses on Design Science Approaches and discusses Alternative Approaches including Semiotics Research, Complexity Theory and Gender in IS Research. The Journal of Information Technology (JIT) was started in 1986 by Professors Frank Land and Igor Aleksander with the aim of bringing technology and management together and bridging the 'great divide' between the two disciplines. The Journal was created with the vision of making the impact of complex interactions and developments in technology more accessible to a wider audience. Retaining this initial focus, the JIT has gone on to extend into new and innovative areas of

research such as the launch of JITTC in 2010. A high impact journal, JIT shall continue to publish leading trends based on significant research in the field.
