Used in conjunction with the
APICS CSCP Learning System, this

A supply chain is a network of retailers, distributors, transporters, storage facilities and suppliers that participate in the sale, delivery and production of a particular product. The concept of supply chain often

Bookmark File PDF Cpim Study S

involves backward integration - acquiring ownership of one's supply chain (in the hope of reducing supplier power and thus reducing input costs). The four major functional components are: demand planning manufacturing planning and scheduling supply

The Certified Supply Chain
Professional (CSCP) certification is
essential for professionals
involved in the areas of supplier
and customer relations,
international trade, the use of
information technology to enable

the supply chain, and physical logistics. Candidates must pass a 3-module exam in order to earn the CSCP designation. The modules are: Module 1 - Supply Chain Design
Module 2 - Supply Chain Planning and Execution
Module 3 - Supply Chain

There are overlapping knowledge,
and it is suggested that you study
these modules together.

Officially, CPIM focuses primarily
on manufacturing and provides
an in-depth view of materials
management, master scheduling,

production planning, forecasting, and quality improvement within an organization, while CSCP takes a broader view to encompass all steps throughout the supply chain. In reality, the CSCP exam and the CPIM BSCM exam share a lot of common topics on SCM.

This ExamFOCUS Study Notes builds a solid focus while revisiting key examination topics relevant to the CSCP exam (and also to the first CPIM module - BSCM). It helps in straight-forward fundamental knowledge establishment. The real CSCP
