and see which of these makes sense. So actually let's just do it both ways.

Creating expressions and equations | Worked example (video ...

The expression $9 + 8$ represents a single number (17). This expression is a numerical expression, (also called an arithmetic expression). The expression $9 + x$ represents a value that can change. If x is 2, then the expression $9 + x$ has a value of 11. If x is 6, then the expression has a value of 15. So $9 + x$ is an algebraic expression. In the next few examples, we will be working solely with ...

"Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to
