primary care practitioners a clinically based, practical understanding of how to diagnose and manage kidney disease (and what this means for the patient). It also fills the gap between the recent plethora of guidelines, protocols and recommendations on CKD and the questions patients ask in everyday clinical practice. Armed with this deeper understanding, healthcare professionals without specialist training in nephrology will be sufficiently informed to be able to manage renal disease with greater safety, effectiveness and efficiency. The author, Robert Lewis, has been a Consultant Renal Physician at the Wessex Regional Renal and Transplant Service, Portsmouth, UK, for 15 years. He has held executive roles in the major national renal organisations and has extensive practical experience of educating primary care practitioners on CKD. He was a founder member of the CKD Forum, which aims to improve the interface between primary and secondary care in the management of CKD
