Dynamic capabilities. In organizational theory, dynamic capability is the capability of an organization to purposefully adapt an organization's resource base. The concept was defined by David Teece, Gary Pisano and Amy Shuen, in their 1997 paper Dynamic Capabilities and Strategic Management, as "the firm's ability to integrate, build, and reconfigure internal and external competences to address rapidly changing environments".

Dynamic capabilities (DC) theory emerged as both an extension to and a reaction against the inability of the resource-based view (RBV) to interpret the development and redevelopment of resources and capabilities to address rapidly changing environments. DC may be considered as a source of competitive advantage (Teece, Pisano & Shuen, 1997).

How do firms grow? How do firms compete? An influential answer to these fundamental questions of business strategy lies in the concept of dynamic capabilities. David Teece provides a clear statement of his ideas, and a framework for managers wishing to assess their organization's strategy.

In a world of ever increasing talent and ever more rapid creation of new knowledge, and in a world that is growing in complexity by the day, it is truly intriguing to learn of capabilities for success and failure in rapid innovation-based industries. The fusion of academic concepts and empirical insights make this book a source of inspiration for inquiring managers. Norbert Walter, Chief Economist of Deutsche Bank and CEO of Deutsche Bank Research, Germany This volume represents a most welcome and important contribution to the emergent and fast-growing dynamic capabilities view (DCV) of the firm and sustainable competitive advantage. It simultaneously helps to assess critically, integrate with a wide range of other perspectives, broaden the scope, and deepen the conceptual foundations of the DCV. In addition and importantly, it links DCV to, and contrasts it with, managerial practice. The authors dispassionate approach is a further plus. The editors have done an excellent job and should be congratulated for this work that should be a must-read. Christos Pitelis, Reader in International Business and Competitiveness, University of Cambridge, UK This path-breaking book provides unique insights into the organisational realities of strategic reconfigurations in uncertain markets, thus advancing the dynamic capability perspective. Dynamic capabilities continue to excite academics. It is a perspective that promises explanations of competitive advantage, but its full potential remains somewhat hidden behind abstract notions. This eloquent volume seeks to overcome the challenge by combining the theory and practice of organisational resource configurations. Joint contributions by expert academics and business executives demystify, but also confirm, elements of the theory. Thus, the book integrates dynamic capabilities with organisational realities as well as with adjacent theories of strategic innovation and entrepreneurship. Strategic Reconfigurations provides a guide to strategic management in turbulent times, for students, researchers, and professionals alike. Business executives in high-velocity markets will find the book invaluable.

This book provides a knowledge-based view to the dynamic capabilities in an organization. The author integrates two existing views on gaining competitive advantage: the Knowledge View which suggests that the capability of organizations to learn faster than competitors is the only source of competitiveness; and the Dynamic Capability View which speculates that a firm's competitive advantage rests on dynamic capabilities which enable a firm to constantly renew the stock of ordinary organizational capabilities in accordance with the changes in the business environment. Using the IT sector in India as a case study, this book provides and tests a new framework--Knowledge-Based Dynamic Capabilities—in the prediction of competitive advantage in organizations.

Creating, adapting to, and exploiting change is inherently entrepreneurial. To survive and prosper under conditions of change, firms must develop the "dynamic capabilities" to create, extend, and modify the ways in which they operate. The capacity of an organization to create, extend, or modify its resource base is vital. Since the concept of dynamic capabilities was first introduced, much research has elaborated the initial idea. This important book by Constance Helfat and her team of leading scholars provides a timely focus on in-depth examples of corporate dynamic capabilities. Examining these in the different contexts of alliances, acquisitions, and management, the book gives students and researchers a succinct, up-to-date definition of dynamic capabilities and the strategic management theories around them.

Inhaltsangabe:Abstract: The field of strategic management deals with understanding the ways how firms achieve competitive advantage and

how they create superior value. Knowledge creation is carried out by explaining phenomena that can be observed in business life and by applying and developing theories and their implications. Often, new perspectives emerge through criticism of existing models. A similar process was necessary to discover the potential of the resource-based view, which had taken almost 30 years from its first systematisation to an increasing amount of literature dealing on the topic. The resource-based view nowadays reflects one of the most important perspectives on strategic management. Basically, the resource-based view is a platform for many research streams, underlying the same basic assumptions, that presently are creating new knowledge, a better understanding and will continue to do so in the future. In fact, the resource-based view is a result from the critics of the industry structure view and has gained its popularity from the potential which it has proven by sourcing several research ideas. Initially, the resource-based view was seen as the opposite of the industry structure view, which is externally oriented whereas the resource-based view focuses on firm's internal processes to achieve competitive advantage. From today's point of view, an integrated ansatz is traced. Every different perspective relies on a certain number of similar assumptions with another perspective. Often, it seems possible to explain business phenomena by integrating theories into a consistent view. This approach has had potential for highly-influential strategic management theories and it has still for future research. Especially, the transaction cost theory provides valuable extensions and explanations for observations within the resource-based view. The same statement is valid for the integration of the resource-based view and the industry structure view. In fact, Prof. Barney who established the most cited basis for the resource-based view in 1991 considered varying embodiments for the resource-based view since the perspective is highly related to micro-economics, evolutionary economics and the industry structure view. With respect to the foundation of the resource-based theory, many other perspectives emerged, such as the competence-based view, the routine-based view, the capability-based view, the dynamic capability perspective, the [...]

This volume presents new methods and applications in longitudinal data estimation methodology in applied economic. Featuring selected papers from the 2020 the International Conference on Applied Economics (ICOAE 2020) held virtually due to the corona virus pandemic, this book examines interdisciplinary topics such as financial economics, international economics, agricultural economics, marketing and management. Country specific case studies are also featured.

From the perspective of commercial and non-commercial organizations, this monograph with contemporary organizational and management problems, focus on four thematic areas. Traditionally, the first one is concentrating the reader's attention on the internal aspects of the organization's functioning as an object of research. In this regard, articles related to the concept of corporate social responsibility in two ways: organizational research and bibliometric analysis. The authors used an analogical (bibliometric) approach to examine trends in publishing for the concept of learning organizations. In this part of the discussion, the social aspect has been strongly displayed, also thanks to the social capital and enterprise. Another topic in this section is the role of the workers' knowledge in creating innovative solutions, emphasizing the role of trust and culture-rich collaboration between employees, employees' participation in creating projects, and organizational change. In addition, it discusses the role of information and knowledge networks and sharing knowledge among employees, which does remain without influence on the shaping of individual employees' careers. Slightly different from the other articles, though set in this section, there is an article referring to the organizational pathology. These considerations are much more valuable, usually because of the difficult access to negative information. The next section presents articles in the context of the modern tools used in the management of commercial and non-commercial organizations. This part of the discussion starts an article about forecasting methods and modern models of business management. In opposition to these considerations, the problem of unused, modern management methods in the local government sector, remains valid. Also, it refers to social media as a source of customer knowledge and management control, which should be considered as a strong and innovative determinant influencing the development of contemporary management methods of a modern enterprise. Interesting considerations are included in the article on the process management, with emphasis on the dynamic management of business processes and IT systems that go with it. The other articles present the concepts of the risk management model in a technology project, business model used in franchising, and the concept of accountability in conjunction with the development of innovation thanks to negotiating the role of intellectual capital. The modern market economy forces organizations to develop their ability to adapt to the conditions by improving their organization continually. It shows how modern-day commercial and non-commercial organizations are competing in a competitive market. This section opens the article, referring to the social competences of students developed during their studies and the competences of the future, which were studied and compared in two universities. The integral part of the organization's functioning of the organization in the environment is their broadly understood cooperation for the implementation of the objectives and achieving a competitive advantage in the market. This trend covers articles referring to the participation of county in networking, modeling synergistic interrelations within the business association, or the conditions that should be met between enterprises and institutions supporting the technological development of the organization. Other considerations concern customer preferences concerning their choice of commercial banks, the factors that determine the choice of financial instruments by small and medium enterprises, or the demands of sustainable family business development. The final part of the articles is related to a broader perspective, and so the functioning of the organization from a sectoral perspective and across industries. A distinctive feature is a sectoral approach to knowledge-based business services, the determinants of knowledge-based products in the pharmaceutical industry, and the behavior of competing companies in the chocolate and confectionery industry. A separate topic in this section is the concept of capturing value or the value in a sectoral approach. The issues related to the protection of personal data in the healthcare sector, patent activity of enterprises in the technology park, as well as the management of resources in the cluster. The prepared monograph is an interdisciplinary compendium of knowledge on the functioning of both commercial and non-commercial organizations in the context of three perspectives: micro, meso, and macro. The advantage of this type of studies is modern and up-to-date look at the problems of management, organization behavior, or the functioning of the organizations in the sector.

Explores how organizational competence and dynamic capabilities can support the competitive position of a firm. This book describes strategic, organizational, and behavioral perspectives on processes of competence development.
