Communication from the brain is sent to the rest of the body by the endocrine system as well as by the nervous system. The endocrine system is a series of glands throughout the body that secrete chemicals (hormones) into the bloodstream; hormones, in turn, affect body functions. The endocrine glands, their locations, and their major functions are given in Table 1.

Endocrine System - CliffsNotes Study Guides

The human endocrine system modulates several processes of the body by the function of hormones. The endocrine system secretes hormones that control how bodily functions work. Thus, the human endocrine system watches over and coordinates all the systems of the body with the use of hormones.
