The new edition of Arkfeld’s Best Practices Guide: ESI Pretrial Discovery -- Strategy and Tactics contains procedural steps, strategy and substantive law considerations related to the pretrial discovery of “electronically stored information” (ESI). These practices are intended to be used as general guidelines for the discovery and production of ESI. Depending on the unique issues of your case, these suggested practices may necessitate a different approach and should be considered on a case-by-case basis. Contents include: • Overview of Electronic Discovery and Information Technology • Preparing an Overall Plan and Strategy • ESI Issues and Strategy • Litigation Stages and Procedural Discovery Rules The eBook versions of this title feature links to Lexis Advance for further legal research options.

The identification and quantification of material present and collected at a crime scene are critical requirements in investigative analyses. Forensic analysts use a variety of tools and techniques to achieve this, many of which use light. Light is not always the forensic analyst’s friend however, as light can degrade samples and alter results. This book details the analysis of a range of molecular systems by light-based techniques relevant to forensic science, as well as the negative effects of light in the degradation of forensic evidence, such as the breakage of DNA linkages during DNA profiling. The introductory chapters explain how chemiluminescence and fluorescence can be used to visualise samples and the advantages and limitations of available technologies. They also discuss the limitations of our knowledge about how light could alter the physical nature of materials, for example by breaking DNA linkages during DNA profiling or by modifying molecular structures of polymers and illicit drugs. The book then explains how to detect, analyse and interpret evidence from materials such as illicit drugs, agents of bioterrorism, and textiles, using light-based techniques from microscopy to surface enhanced Raman spectroscopy. Edited by active photobiological and forensic scientists, this book will be of interest to students and researchers in the fields of photochemistry, photobiology, toxicology and forensic science.

Proceedings of the FISITA 2012 World Automotive Congress are selected from nearly 2,000 papers submitted to the 34th FISITA World Automotive Congress, which is held by Society of Automotive Engineers of China (SAE-China ) and the International Federation of Automotive Engineering Societies (FISITA). This proceedings focus on solutions for sustainable mobility in all areas of passenger car, truck and bus transportation. Volume 7: Vehicle Design and Testing (I) focuses on: •Vehicle Performance Development •Vehicle Integration Platformized and Universal Design •Development of CAD /CAE/CAM and CF Methods in Automotive Practice •Advanced Chassis, Body Structure and Design •Automotive Ergonomic, Interior and Exterior Trim Design •Vehicle Style and Aerodynamic Design •New Materials and Structures Above all researchers, professional engineers and graduates in fields of automotive engineering, mechanical engineering and electronic engineering will benefit from this book. SAE-China is a national academic organization composed of enterprises and professionals who focus on research, design and education in the fields of automotive and related industries. FISITA is the umbrella organization for the national automotive societies in 37 countries around the world. It was founded in Paris in 1948 with the purpose of bringing engineers from around the world together in a spirit of cooperation to share ideas and advance the technological development of the automobile.

Generally a laser (light amplification by stimulated emission ofradiation) is defined as “a device which uses a quantummechanical effect, stimulated emission, to generate a coherent beamof light from a lasing medium of controlled purity, size, andshape”. Laser material processing represents a great numberof methods, which are rapidly growing in current and differentindustrial applications as new alternatives to traditionalmanufacturing processes. Nowadays, the use of lasers inmanufacturing is an emerging area with a wide variety ofapplications, for example, in electronics, molds and dies, andbiomedical applications. The purpose of this book is to present a collection of examplesillustrating the state of the art and research developments tolaser in manufacturing, covering laser rapid manufacturing, lasersin metal forming applications, laser forming of metal foams,mathematical modeling of laser drilling, thermal stress analysis,modeling and simulation of laser welding, and the use of lasers insurface engineering. This book can be used as a research book for a final undergraduateengineering course or as a subject on lasers in manufacturing atthe postgraduate level. Also, this book can serve as a usefulreference for academics, laser researchers, mechanical,manufacturing, materials or physics engineers, or professionals inany related modern manufacturing technology. Contents 1. Laser Rapid Manufacturing: Technology, Applications, Modelingand Future Prospects, Christ P. Paul, Paikaj Bhargava, Anil Kumar,Ayuk K. Pathak and Lalit M. Kukreja. 2. Lasers in Metal Forming Applications, Stephen A. Akinlabi, MukulShukla, Esther T. Akinlabi and Tshildzi Marwala. 3. Laser Forming of Metal Foams, Fabrizio Quadri, DeniseBellisario, Erica A. Squeo and Loredana Santo. 4. Mathematical Modeling of Laser Drilling, Maturose Suchatawat andMohammad Sheikh. 5. Laser Cutting a Small Diameter Hole: Thermal Stress Analysis,Bekir S. Yilbas, Syed S. Akhtar and Omer Keles. 6. Modeling and Simulation of Laser Welding, Karupudayar R.Balasubramanian, Krishnasamy Sankaranarayanan and Gangusami N.Buvanahakaran. 7. Lasers in Surface Engineering, Alberto H. Garrido, RubenGonzález, Modesto Cadenas, Chin-Pei Wang and FarshidSadeghi.

The book is intended for all those who are interested in application problems related to dynamical systems. It provides an overview of recent findings on dynamical systems in the broadest sense. Divided into 46 contributed chapters, it addresses a diverse range of problems. The issues discussed include: Finite Element Analysis of optomechatronic choppers with rotational shafts; computational based constrained dynamics generation for a model of a crane with compliant support; model of a kinetic energy recuperation system for city buses; energy accumulation in mechanical resonance; hysteretic properties of shell dampers; modeling a water hammer with quasi-steady and unsteady friction in viscoelastic conduits; application of time-frequency methods for the assessment of gas metal arc welding conditions; non-linear modeling of the human body’s dynamic load; experimental evaluation of mathematical and artificial neural network modeling for energy storage systems; interaction of bridge cables and wake in vortex-induced vibrations; and the Sommerfeld effect in a single DOF spring-mass-damper system with non-ideal excitation.

Comprehensive in scope, New York e-Discovery and Evidence • Describes the creation, storage, and production of electronically stored information. • Suggests how to deal with the dynamic information stored in metadata. • Discusses the need to avoid spoliation and retrieve, restore, or translate the material before it is produced. • Examines issues regarding relevance and privilege. • Explains how to use electronically stored information at trial. Targeted Practical Guidance: • Task-based checklists, with cites to applicable court rules and case law, take litigators step-by-step through the various areas of e-discovery. A master checklist serves as a starting point for performing any task in the e-discovery process. • Real World Practice Tips-- including strategic points, warnings, timing and exceptions -- raise critical issues and prevent missteps. • Dozens of attorney-drafted and court-tested forms save time and streamline work flow. This eBook features links to Lexis Advance for further legal research options.
