In his latest book, author Skip Coleman takes a comprehensive look at search for the fire service.

Searching Smarter defines the three most common types of search (the standard, oriented, and team search) and applies them to existing common occupancy types (residential and commercial occupancy). It also discusses the relationship between command and other divisions/groups, search basics, and reading buildings for search.

It is an important resource for fire fighters riding all apparatus types, company and chief officers, and paid and volunteer fire fighters.

In this new book, Bill Kramer examines the complexities of disaster planning and control, covering the concepts of disaster management, development of disaster and emergency operation plans, and much more. Through examples and case studies, the book is designed to allow the fire officer to study how the fire service has been involved with responding to various disasters and, by learning from the past and understanding the concepts presented, make a difference in the overall outcome of future events. Disaster Planning and Control will be an invaluable resource for anyone involved in disaster response--from the frontline worker to the highest elected official. This book is written to the FESHE model curriculum for the Disaster Planning and Recovery course.

Designing structures to withstand the effects of fire is challenging, and requires a series of complex design decisions. This third edition of Fire Safety Engineering Design of Structures provides practising fire safety engineers with the tools to design structures to withstand fires. This text details standard industry design decisions, and offers expert design advice, with relevant historical data. It includes extensive data on materials' behaviour and modeling -- concrete, steel, composite steel-concrete, timber, masonry, and aluminium. While weighted to the fire sections of the Eurocodes, this book also includes historical data to allow older structures to be assessed. It extensively covers fire damage investigation, and includes as far back as possible, the background to code methods to enable the engineer to better understand why certain procedures are adopted. What's new in the Third Edition? An overview in the first chapter explains the types of design decisions required for optimum fire performance of a structure, and demonstrates the effect of temperature rise on structural performance of structural elements. It extends the sections on less common engineering materials. The section on computer modelling now includes material on coupled heat and mass transfer, enabling a better understanding of the phenomenon of spalling in concrete. It includes a series of worked examples, and provides an extensive reference section. Readers require a working knowledge of structural mechanics and methods of structural design at ambient conditions, and are helped by some understanding of thermodynamics of heat transfer. This book serves as a resource for engineers working in the field of fire safety, consultants who regularly carry out full fire safety design for structure, and researchers seeking background information. Dr John Purkiss is a chartered civil and structural engineer/consultant and former lecturer in structural engineering at Aston University, UK. Dr Long-Yuan Li is Professor of Structural Engineering at Plymouth University, UK, and a Fellow of the Institution of Structural Engineers.

Drive to Survive: The Art of Wheeling the Rig provides an in-depth examination of fire apparatus vehicle dynamics. This is not your average "driver training" textbook. Fire apparatus operators must understand how a vehicle maneuvers at roadway speed, and more importantly...why does it crash? Just as a doctor cannot heal the human body without a thorough understanding of anatomy and physiology, an emergency vehicle operator cannot safely drive a fire apparatus without an in-depth knowledge of vehicle dynamics. Drive to Survive fills in the gaps between vehicle dynamics and crash causation. After 15 years of training and research, Chris Daly developed a training program combining his fire service and crash reconstruction training experience. Fire apparatus operators will learn the limits of driving an emergency vehicle and will understand that no matter how long they have been driving or how good they think they are, at some point physics will take over and the vehicle will lose control. Drive to Survive goes beyond talking about pump operations, aerial operations, and preventative maintenance. We can reduce the number of emergency vehicle crashes throughout the world by addressing key issues and providing emergency vehicle operations course (EVOC) instructors with methods to convey these concepts. Concepts you learn in this book relate to more than just driving a fire apparatus. These principles apply to anyone who drives a vehicle, including your family members and loved ones.

John Norman has updated his best-selling book, a guide for the firefighter and fire officer who, having learned the basic mechanics of the trade, are looking for specific methods for handling specific situations. In this new fourth edition, readers will find a new chapter on lightweight construction, a new chapter on electrical fires and emergencies, updates to many chapters including such topics as wind-driven fires, and many new illustrations.

This book serves as a guide for the seasoned veteran, the new firefighter and everyone in between, bringing them together for what it all takes to have that love for the job.

This important new book is designed to serve many purposes in the fire service, ranging from being a starting point and refresher guide for firefighters seeking promotions at any level, to being a field operational guide for on-scene Incident Commanders and Company Officers. It offers an easy-to-follow, step-by-step

action plan for firefighters working in Acting Capacities, and can be used when developing SOPs, and when organizing and planning training evolutions. It is definitely a book every firefighter, officer, and aspiring officer will want to own!

Into the Smoke is a work of photojournalism and traces Tom Barry's career as a firefighter--spanning parts of four decades in FDNY--along with the forty-year effort of noted freelance photographer Michael Dick. The era covered in this book is best known in the fire service on the east coast of the United States as the War Years, the urban decay and social unrest that started in the 1960s and persisted, continually fed by arson for profit, into the 1990s. Firefighting is a truckie blindly crawling down a smoke-filled hallway, searching for victims, hoping to find them before the fire does. It is an engine operator, calling on the last ounce of strength and pushing deeper into the apartment to extinguish the fire in the rear bedroom and beat the "Red Devil" one more time. Fellowship of the firefighter Fantasies from childhood intertwine with the terror of impending death, the pain of disfigurement, the joys of success, and the comradeship and respect of their peers. Many of the fires depicted in this book predate OSHA personal protective equipment (PPE) requirements. This period was a fertile stage for innovation and development of firefighting techniques and equipment.

In his new book Step Up and Lead, Frank Viscuso--author, speaker, and career deputy chief--shares the secrets of effective fire service leadership, introduces the traits and skills essential for successful fire service leaders, and discusses the importance of customer service. Designed to help you reach the top of your profession, this new book is considered must-read material for anyone who is ready to step up and lead!
