Brainstorm possible solutions. Change what doesn't work; Find and use resources; Decide which solution is best; Put that solution into play; Build on each successive step; Try to do more of what works; Use an alternative solution if not achieving the required results

Focus on solutions, not problems. - Dr. Ivan Misner®

One of the secrets to great leadership is the ability to move forward and the only way to move forward is to find solutions rather than focus on the problems. This is not to say that we should ignore problems or not spend time analyzing them. The key is to spend just enough time on a problem to learn from it and then focus on how to fix it.

Focus on Solutions not Problems - YOUR LEADERSHIP MATTERS

Solution Focus is part of the new wave of thinking about effective change that includes Appreciative Inquiry, Positive Psychology and NLP. Unlike previous 'big ideas' of the 1990s like business process re-engineering and downsizing (with all the disruption they entailed), Solution Focus is a big idea that focuses on small steps and keeping it simple.

The very first step to approach problems with solution focused thinking is to avoid questions that mainly focus on the reason or the problem in general. You need to clarify yourself that the question for the "WHY" will only waste important time that you could have invested to solve a given problem.

Since that's the case, it's better (and way more productive) to focus on the solution instead. Your mind can only give its full attention to one thing at a time. If you focus on the problem, negative thoughts can overtake you more readily. Fear, self-doubt and worry may prevent you from moving forward and dealing with the issue at hand.

Solution Focused Brief Therapy (SFBT) promotes collaborative work and positive outcomes. It is an approach that can be used in acute hospitals as well as with clients who are seen as outpatients or in the community. Written in an accessible style with over seventy case examples Focus on Solutions shows how SFBT can help people who are suffering from voice or memory difficulties, a stammer, a stroke, HIV, traumatic brain injury or illnesses such as cancer or Parkinson's disease. The book provides a practical framework as to how individuals, families and groups can begin to work on their strengths by focusing on the solutions rather than the problems in their lives. Focus on Solutions contains many useful ideas for experienced practitioners and those new to solution focused work, which is of growing importance in the health service as well as business and education. Therapists, doctors, nurses or psychologists will find this book an invaluable contribution to the field of reflective practice.

The Center and Focus Problem: Algebraic Solutions and Hypotheses, M. N. Popa and V.V. Pricop, ISBN: 978-1-032-01725-9 (Hardback) This book focuses on an old problem of the qualitative theory of differential equations, called the Center and Focus Problem. It is intended for mathematicians, researchers, professors and Ph.D. students working in the field of differential equations, as well as other specialists who are interested in the theory of Lie algebras, commutative graded algebras, the theory of generating functions and Hilbert series. The book reflects the results obtained by the authors in the last decades. A rather essential result is obtained in solving Poincaré's problem. Namely, there are given the upper estimations of the number of Poincaré-Lyapunov quantities, which are algebraically independent and participate in solving the Center and Focus Problem that have not been known so far. These estimations are equal to Krull dimensions of Sibirsky graded algebras of comitants and invariants of systems of differential equations. Table of Contents 1. Lie Algebra Of Operators Of Centro-Affine Group Representation In The Coefficient Space Of Polynomial Differential Systems 2. Differential Equations For Centro-Affine Invariants And Comitants Of Differential Systems And Their Applications 3. Generating Functions And Hilbert Series For Sibirsky Graded Algebras Of Comitants And Invariants Of Differential Systems 4. Hilbert Series For Sibirsky Algebras And Krull Dimension For Them 5. About The Center And Focus Problem 6. On The Upper Bound Of The Number Of Algebraically Independent Focus Quantities That Take Part In Solving The Center And Focus Problem For The System s(1,m1,...,m1) 7. On The Upper Bound Of The Number Of Algebraically Independent Focus Quantities That Take Part In Solving The Center And Focus Problem For Lyapunov System. Bibliography Appendix Biographies Popa Mihail Nicolae, holds a Ph.D. from Gorky University (now Nizhny Novgorod, Russia). He has served as Director and Deputy Director of Vladimir Andrunachievici Institute of Mathematics and Computer Science (IMCS) in the Laboratory of Differential Equations. He is Professor at the State University of Tiraspol (based in Chisinau). His scientific interests are related to the invariant processes in the qualitative theory of differential equations, Lie algebras and commutative graded algebras, generating functions and Hilbert series, orbit theory, Lyapunov stability theory. Pricop Victor Vasile, holds a Ph.D. from Vladimir Andrunachievici Institute of Mathematics and Computer Science. He is professor at the State Institute of International Relations of Moldova. Victor Pricop's scientific interests are related to Lie algebras and graded algebras of invariants and comitants, generating functions and Hilbert series, applications of algebras to polynomial differential systems.

These books were written as consultation books to be used to solve problems. They are essentially analogous to medical books for individuals who decided to manage the concepts and fundamentals of things in order to manage the root causes of problems. Unicorn Reflection has been developed to deal with complex human adaptive systems, such as businesses, to develop scenarios, diagnoses and strategies to achieve possible results. Unicorn Reflection requires having a final picture in mind. It requires positive thinkers; individuals who see the bottle half full, not half empty.

Fourteen organisations all over the world tell the stories of how Solutions Focus has helped them to change - and show you many ways to find what works in the workplace. organisational change simple. The fourteen real life cases described here illustrate the Solutions Focus approach in action from widescale change to everyday effective management, e.g. British Sky Broadcasting, Bayer Cropscience, the Cooperative Group, the Ontario Medical Association and Freescale Semiconductor. They worked on issues including restructuring, strategy development, sales improvement, continuous improvement, team development, outplacement, training and job satisfaction. Jenny Clarke guides you through the ins and outs of each case, and draws 80 lessons which you can use in building positive change at work and keeping things as simple as possible - but no simpler.

This is a new and updated edition of this acclaimed first business book on the powerful, simple yet subtle approach to positive change in people, teams and organisations. Used around the world by a wide range of people, professions and organisations, the first edition has now sold nearly 10,000 copies and been translated into 7 languages. Including new chapters reflecting the increasing importance of coaching and the solutions focus movement in the business environment, this wide-ranging book is filled with all the most important ideas, case examples and practical tips for managers, facilitators and consultants. Proven in many fields and with a distinguished intellectual heritage, 'The Solutions Focus' provides a simple and direct route to progress in your organisation. It focuses on: solutions - not problems; in between; the action is in the interaction; make use of what's there; possibilities - past, present and future; and language. Every case is different. The trouble with traditional approaches to people problems is that they assume a straightforward relationship between cause and effect, between a problem and its solution. A solutions-focused approach sidesteps the search for the causes of a problem and heads straight for the solution, showing you how to envisage your preferred future and quickly takes steps forward. The authors present a set of practical techniques, including specific forms of questioning that lead to immediate action and results. They show how to identify what is working in your organisation and amplify it to make useful changes; to focus on what is possible rather than what is intractable and how to be solution focused, not solution forced.

The first Solutions Focus field book. This collection of articles from the AMED journal 'Organisations & People' describes international experience of applying the positive power of Solutions Focus and Appreciative Inquiry to Coaching, Team Remotivation, Supervision, Performance Management, Strategic Planning, Feedback, Organisation Development, Staff Appraisal, Competence Management, and Community Development. Contributors include Louis Cauffman, Sheila McNamee, Paul Z. Jackson, Peter Szabo, Gunter Lueger, Harry Norman and others from the UK, across Europe and the USA. This collection gives you new applications and ideas about staying pragmatically positive and incisively simple in many organisational contexts. Includes a new and expanded introduction by Mark McKergow comparing positive psychology, Appreciative Inquiry and Solutions Focus.

• New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world "At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope." —Pär Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming "There's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom." —David Roberts, Vox "—This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook." —Peter Keteiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.
