MATLAB® has become one of the prominent languages used in research and industry and often described as "the language of technical computing". The focus of this book will be to highlight the use of MATLAB® in technical computing; or more specifically, in solving problems in Process Simulations. This book aims to bring a practical approach to expounding theories: both numerical aspects of stability and convergence, as well as linear and nonlinear analysis of systems. The book is divided into three parts which are laid out with a "Process Analysis" viewpoint. First part covers system dynamics followed by solution of linear and nonlinear equations, including Differential Algebraic Equations (DAE) while the last part covers function approximation and optimization. Intended to be an advanced level textbook for numerical methods, simulation and analysis of process systems and computational programming lab, it covers following key points

- Comprehensive coverage of numerical analyses based on MATLAB for chemical process examples.
- Includes analysis of transient behavior of chemical processes.
- Discusses coding hygiene, process animation and GUI exclusively.
- Treatment of process dynamics, linear stability, nonlinear analysis and function approximation through contemporary examples.
- Focus on simulation using MATLAB to solve ODEs and PDEs that are frequently encountered in process systems.

In a contemporary setting of increasing social division and marginalisation, Policing Hate Crime interrogates the complexities of prejudice motivated crime and effective policing practices. Hate crime has become a barometer for contemporary police relations with vulnerable and marginalised communities. But how do police effectively lead conversations with such communities about problems arising from prejudice? Contemporary police are expected to be active agents in the pursuit of social justice and human rights by stamping out prejudice and group-based animosity. At the same time, police have been criticised in over-policing targeted communities as potential perpetrators, as well as under-policing these same communities as victims of crime. Despite this history, the demand for impartial law enforcement requires police to change their engagement with targeted communities and kindle trust as priorities in strengthening their response to hate crime. Drawing upon a research partnership between police and academics, this book entwines current law enforcement responses with key debates on the meaning of hate crime to explore the potential for misunderstandings of hate crime between police and communities, and illuminates ways to overcome communication difficulties. This book will be important reading for students taking courses in hate crime, as well as victimology, policing, and crime and community.

This is the first complete biography of Maxim Litvinov, a Bolshevik revolutionary who began his professional life running guns into Tsarist Russia and eventually became the leading Soviet diplomat in the turbulent 1930s. His was a spectacular career, spanning some of the most dramatic decades of the twentieth century and including an unsuccessful effort to contain Hitler with the cooperation of the Western Allies. Litvinov's subsequent replacement as Soviet foreign minister by Molotov in 1939 signaled the dramatic shift in Soviet foreign policy that led directly to the outbreak of World War II. After the war, Litvinov's final public act was to bluntly warn the West of the danger presented by Stalin's cold war policies—a threat Litvinov even dared to compare with that posed by Hitler a decade earlier. Litvinov's career ended in the relative obscurity from which it had sprung, his consistently pro-Western policies no longer consonant with the reemerging Soviet hostility toward the West. Passing away from remarkably natural causes in 1951, Litvinov left behind a political legacy that lay dormant for forty years until its recent revival by Mikhail Gorbachev. *Between the Revolution and the West* is based on extensive research in the Soviet Union and the West, including previously unavailable archives and interviews with Litvinov's friends and family. Hugh Phillips' work casts light not only on Litvinov the man but also on Soviet foreign policy during crucial and dramatic times.

Seventeen weeks pregnant and facing a miscarriage, Savita Halappanavar and her husband Praveen walked into an Irish maternity ward in October 2012. Unwittingly, the couple also walked into that deeply controversial arena in which Ireland's legislative position on abortion remained unresolved. A week later, Savita was dead from septicaemia. Reports of her death and of the refusal to allow Savita a termination of her pregnancy sent shockwaves across Ireland and around the world. Once again the subject of abortion was catapulted to the very top of the agenda in Ireland. With the pro-life and pro-choice camps claiming the moral high ground, both sides in the bitterly contested battle sought to appropriate Savita's story and her image. In the midst of the ensuing rage and furore, the marches and protests, the threats and counter-threats that exploded across political and media platforms, Savita and the complete circumstances of her death were lost. In *Savita: The Tragedy That Shook A Nation*, Kitty Holland addresses this imbalance as she reveals the truth behind the headlines and explores many unanswered questions: Who was Savita? How significant was it that she was a non-Irish, non-Catholic woman in search of help on Irish soil? And how did her husband and her community's reaction to her death shape the parameters of the debate which followed? Holland's exposé also looks at how the tragic circumstances of Savita's death played a part in compelling the Irish Government to finally legislate on abortion and how activists on each side succeeded or failed in shaping that legislation.

Although scientific models and simulations differ in numerous ways, they are similar in so far as they are posing essentially philosophical problems about the nature of representation. This collection is designed to bring together some of the best work on the nature of representation being done by both established senior philosophers of science and younger researchers. Most of the pieces, while appealing to existing traditions of scientific representation, explore new types of questions, such as: how understanding can be developed within computational science; how the format of representations matters for their use, be it for the purpose of research or education; how the concepts of emergence and supervenience can be further analyzed by taking into account computational science; or how the emphasis upon tractability—a particularly important issue in computational science—sheds new light on the philosophical analysis of scientific reasoning.

Design and Optimization of Biogas Energy Systems presents an overview on planning, implementing, assessing and optimizing biogas systems, from fuel conversion to power generation. The book introduces the fundamental elements of bioenergy systems, highlighting the specificities of biogas systems. It discusses the current state of their adoption at a global level and the challenges faced by designers and operators. Methods for sizing, simulating and modeling are discussed, including prefeasibility analysis, available production processes, integration into hybrid energy systems, and the application of Big Data analysis and game theory concepts. All chapters include real-life examples and exercises to illustrate the topics being covered. The book goes beyond theory to offer practical knowledge of methods to reach solutions to key challenges in the field. This is a valuable resource for researchers, practitioners and graduate students interested in developing smart, reliable and sustainable biogas technologies. Provides an applied approach to biogas systems, from technology fundamentals, to economic and environmental assessment Explores control methods and reliability prediction of each system component, including modeling and simulation with HOMER and MATLAB Discusses the use of Big Data analysis, numerical methods, and Game Theory for plant assessment

This one hundred page book focuses exclusively on how you can best use the ASP.NET MVC 4 Framework to build world-class REST services using the Web API. It sets aside much of what the ASP.NET MVC Framework can do, and focuses exclusively on how the Web API can help you build web services. You will not find any help on CSS, HTML, JavaScript, or jQuery. Nor will you find any help on the Razor view engine, HTML Helpers, or model binding. If you need this information then Pro ASP.NET MVC 4 is your perfect book. ASP.NET MVC 4 and the Web API: Building a REST Service from Start to Finish helps you build cutting-edge REST services using ASP.NET MVC 4 and the Web API in more depth and detail than any other resource. ASP.NET MVC has always been a good platform on which to implement REST, but with the advent of the Web API it has now become even better. This book will show you why it's great and how to get the most from it. Author Jamie Kurtz will take you from zero to full-blown REST service hero in no time at all. And you'll even learn how to incorporate some popular open source tools along the way: little or no experience with ASP.NET or the MVC Framework is required.

Pre-crime aims to pre-empt ' would-be-criminals ' and predict future crime. Although the term is borrowed from science fiction, the drive to predict and pre-empt crime is a present-day reality. This book critically explores this major twenty-first century development in crime and justice. This first in-depth study of pre-crime defines and describes different types of pre-crime and compares it to traditional post-crime and crime risk approaches. It analyses the rationales that underpin pre-crime as a response to threats, particularly terrorism, and shows how it is spreading to other areas. It also underlines the historical continuities that prefigure the emergence of pre-crime, as well as exploring the new technologies and forms of surveillance that claim the ability to predict crime and identify future criminals. Through the use of examples and case studies it provides insights into how pre-crime generates the crimes it purports to counter, providing compelling evidence of the problems that arise when we act as if we know the future and aim to control it through punishing, disrupting or incapacitating those we predict might commit future crimes. Drawing on literature from criminology, law, international relations, security and globalization studies, this book sets out a coherent framework for the continued study of pre-crime and addresses key issues such as terminology, its links to past practises, its likely future trajectories and its impact on security, crime and justice. It is essential reading for academics and students in security studies, criminology, counter-terrorism, surveillance, policing and law, as well as practitioners and professionals in these fields.
