Antarctica extends from 60°S to the South Pole. About the size of the United States and Mexico combined, Antarctica is typically divided into three regions: East Antarctica, West Antarctica, and the Antarctic Peninsula. Antarctica is completely surrounded by the Southern oceans. Map showing the three regions of Antarctica.

Geo-information technology can be of considerable use in disaster management, but with considerable challenge in integrating systems, interoperability and reliability. This book provides a broad overview of geo-information technology, software, systems needed, currently used and to be developed for disaster management. The text invites discussion on systems and requirements for use of geo-information under time and stress constraints and unfamiliar situations, environments and circumstances.

This new edition for the revised 2018 syllabus has been endorsed by Cambridge International Examinations. - Covers the full content of the syllabus - Written by the same renowned author team as the first edition and the bestselling Cambridge IGCSE Geography - Supports the development of geographical skills, which feature more prominently in the latest syllabus

Endorsed for Edexcel Trust the leading A level Geography publisher to boost your students' geographical knowledge and skills with a fully updated edition of our bestselling Student's Book, designed to provide the in-depth subject coverage, developmental activities and exam support you need at a time of curriculum change. - Helps students acquire, apply and revise core knowledge using clear explanations of key geographical content and concepts - Progressively builds the geographical and data skills emphasised in the 2016 specification by offering plenty of opportunities to learn and practise relevant skills for each topic - Brings geographical theory to life with a bank of engaging, up-to-date case studies, examples and place contexts - Consolidates topic knowledge and enables students to track their learning with review questions at the end of each chapter - Prepares students for the demands of AS and A level examinations by including numerous exam-style questions, ideal for skills development and rolling revision throughout the course - Makes it easier for you to meet the increased fieldwork requirements, suggesting topic-focused enquiries for both physical and human geography

Cramming all new-case studies, new geographic data and realms of new questions, this new Pearson Edexcel A-level Geography student book will capture imaginations as it travels around the globe. This new book will help your students develop the geographical skills and knowledge they need to succeed. It has been written by our expert author team and structured to provide support for learners of all abilities. The book includes: - Activities and regular review questions to reinforce geographical knowledge and build up core geographical skills - Clear explanations to help students to grapple with tricky geographical concepts and grasp links between topics - Case studies from around the world to vividly demonstrate geographical theory in action - Exciting fieldwork projects that meet the fieldwork and investigation requirements This student book is supported by digital resources on our new digital platform Boost, providing a seamless online and offline teaching experience.

Exam board: AQA, Edexcel, OCR, WJEC/Eduqas Level: A-level Subject: Geography First teaching: September 2016 First exams: Summer 2017 (AS); Summer 2018 (A-level) Master the in-depth knowledge and higher-level skills that A-level Geography students need to succeed; this focused topic book extends learning far beyond your course textbooks. Blending detailed content and case studies with questions, exemplars and guidance, this book: - Significantly improves students' knowledge and understanding of A-level content and concepts, providing more coverage of Glaciated Landscapes than your existing resources - Strengthens students' analytical and interpretative skills through questions that involve a range of geographical data sources, with guidance on how to approach each task - Demonstrates how to evaluate issues, with a dedicated section in every chapter that shows how to think geographically, consider relevant evidence and structure a balanced essay - Equips students with everything they need to excel, from additional case studies and definitions of key terminology, to suggestions for further research and fieldwork ideas for the Independent Investigation - Helps students check, apply and consolidate their learning, using end-of-chapter refresher questions and discussion points, plus tailored advice for the AQA, Edexcel, OCR and WJEC/Eduqas specifications - Offers trusted and reliable content, written by a team of highly experienced senior examiners and reviewed by academics with unparalleled knowledge of the latest geographical theories

The book includes: - Activities and regular review questions to reinforce geographical knowledge and build up core geographical skills - Clear explanations to help students to grapple with tricky geographical concepts and grasp links between topics - Case studies from around the world to vividly demonstrate geographical theory in action - Exciting fieldwork projects that meet the fieldwork and investigation requirements This student book is supported by digital resources on our new digital platform Boost, providing a seamless online and offline teaching experience.

Research in the field of automated generalisation has faced new challenges in recent years as a result of technological developments in web-based processing, new visualisation paradigms and access to very large volumes of multi-source data generated by sensors and humans. In these contexts, map generalisation needs to underpin 'on-demand mapping', a form of mapping that responds to individual user requirements in the thematic selection and visualisation of geographic information. It is this new impetus that drives the research of the ICA Commission on Generalisation and Multiple Representation (for example through its annual workshops, biannual tutorials and publications in international journals). This book has a coherent structure, each chapter focusing on core concepts and tasks in the map generalisation towards on-demand mapping. Each chapter presents a state-of-the-art review, together with case studies that illustrate the application of pertinent generalisation methodologies. The book addresses issues from data gathering to multi scaled outputs. Thus there are chapters devoted to defining user requirements in handling specifications, and in the application and evaluation of map generalisation algorithms. It explores the application of generalisation methodologies in the context of growing volumes of data and the increasing popularity of user generated content.

Smart city is mindful every second and communicates, in real time, analyzed knowledge to citizen for satisfactory way of life, with easy delivery of services, comfortable mobility, conserving energy, environment and other natural resources, and creating energetic communities and a vibrant urban economy. Geographic Information Systems for Smart Cities explores the role of GIS in upgrading existing cities to smart cities. Beginning with a discussion on process of transition from existing GIS to smart city GIS, the book goes on to explore the GIS for smart and sustainable urbanization, practical difficulties in implementing and maintaining such self-aware GIS, open large scale geo-data management and web map services to achieve the smart city goals; role of GIS in community development. The book explains the adaptive urbanism for sea-level rise and environmentally sensitive land-use allocation for coastal smart cities. Chapters explaining the use of GIS for slum management and smart buildings in smart cities are also included. To emphasize on the importance of mobility in smart cities, the book discusses the role of using intra-day trip generation and travel management for a smart city, intelligent goods transportation system; GIS-based land-use suitability and transportation model. The latter part of the book explores agent-based simulation focused on natural disasters and safe location; biourbanism as a new framework for smart cities studies; new discipline of smart planning. Smart cities future, opportunities and barriers through scenario-based urban planning support system are discussed in detail. How past Indian experiences can be extended in future for smart Indian cities is explained. The book concludes with the identification of existing cities for upgradation, ways and means of activation of smart communities, smart institutional framework, smart economy and deployment of smart urban technologies. With its distinguished editor and international team of contributors, Geographic Information Systems for Smart Cities is a standard reference work for city planners, urban managers, GIS specialists, and policy makers who are actively involved in building smart cities.
