Geography Education in the Digital World draws on theory and practice to provide a critical exploration of the role and practice of geography education within the digital world. It considers how living within a digital world influences teacher identity and professionalism and is changing young people ' s lives. The book moves beyond the applied perspective of educational technology to engage with wider social and ethical issues of technology implementation and use of digital data within geography education. Situated at the intersection between research and practice, chapters draw on a wide range of theory to consider the role, adoption and potential challenges of a range of digital technologies in furthering geographical education for future generations. Bringing together academics from the fields of geography, geography education and teacher education, the book engages with four key themes within the digital world: Professional practice and personal identities. Geographical sources and connections. Geospatial technologies. Geographical fieldwork. This is a crucial read for geographers, geography educators and geography teacher educators, as well as those engaging with existing and new technologies to support geographical learning in the dynamic context of the digital world. It will also be of interest to any students, academics and policymakers wanting to better understand the impact of digital media on education.

This book informs an international audience of teachers, scholars and policymakers about the development of learning progressions for primary and secondary geography education in various countries and regions of the world. The book represents an important contribution to learning progressions research and practice. The different chapters explore how curriculum standards and frameworks in different countries portray progress and sophistication in the learning of geography. The book compares educational systems and how teachers and curriculum developers use the concept of “ learning progression ” to guide educational practices. As an approach to educational research, learning progressions offer considerable potential for understanding how children develop understanding of geographic concepts and practices across grade bands and in relation to national geography standards. The book analyzes the general conditions of learning progressions within the context of a globalized world. Important themes are addressed such as: knowledge acquisition in formal education; measuring learning progressions in informal settings; learning progressions for one curriculum standard or several standards; conditions to assess progression in the learning of facts, concepts, and skills; and multiple pathways for understanding or learning geography. The contributing authors are experienced scientists in the field from all around the world giving specific insights into the practices of their countries. The book appeals to K-12 teachers, school administrators, policymakers, researchers in geography education, professors and lecturers at universities around the world.

GRADES 3 – 6: With age-appropriate activities, this beginning social studies workbook helps children build knowledge and skills for a solid foundation in map skills and geography. INCLUDES: This elementary workbook features easy-to-

follow instructions and practice on key topics such as US geography, grid maps, US regions, global geography, North and South American geography, and more! **ENGAGING:** This geography and map workbook features colorful photographs and illustrations with fun, focused activities to entertain children while they grasp concepts and skills for success. **HOMESCHOOL FRIENDLY:** This elementary workbook for kids is a great learning resource for at home or in the classroom and allows parents to supplement their children's learning in the areas they need it most. **WHY CARSON DELLOSA:** Founded by two teachers more than 40 years ago, Carson Delloso believes that education is everywhere and is passionate about making products that inspire life's learning moments.

This 9-hour free course, for those either studying or teaching geography, explored both the characteristics of the subject and its educational role.

Early years and primary are often seen as very separate stages of development, although children are expected to progress from one key stage to another in a seamless way and the historical and philosophical ideas underpinning practice at the different stages are often the same or similar. To be fully effective professionals need to understand and reflect on both children ' s experiences before and after the stage they are currently working in and the historical and current ideas and practice. The current drive is to equip professionals working with young children with higher level understandings and skills and this involves consideration of the key historical and current theories and the development of the conceptual and philosophical frameworks which positively impact on current practice. The strengths of this book are that it develops the necessary understandings and skills and closes the gap between professionals working together to support children holistic development. It also provides opportunities to engage in critical debate on current issues in professional practice, as identified in national and international reports and develop their skills through this engagement. It will be of benefit to a range of students on Initial Teacher Education, Education Studies and Early Childhood Studies programmes, as well as professionals working with children from birth to 11 years of age (from early career to leaders) and lecturers teaching HE courses.

Learning Primary Geography: Ideas and inspiration from classrooms celebrates children ' s learning in primary geography. It is a book for all student and practising teachers who would like children to learn about their world in an enjoyable and stimulating way. Every page presents inspiring examples of children ' s learning, and explains how and why creative approaches such as enquiry learning, learning outside the classroom, and using imaginative resources work so well in primary geography. Using illustrated case studies from a range of schools and classrooms, each chapter showcases the fantastic work all children can do in primary geography. The book explores a wide variety of geographical learning, with chapters focusing on key aspects of the subject, including: primary geography through the school grounds topical geography through issues and events learning about places in primary geography children ' s agency and action through primary geography Throughout the chapters, the role of primary geography in helping children develop all types of literacies, including spatial, critical and digital literacies, is explored. Written by a highly experienced teacher and lecturer in education, **Learning Primary Geography** is underpinned and illustrated by examples from a wide range of primary classrooms. It will be a source of support, guidance and inspiration for all those teaching geography in the primary school.

This book discusses current challenges related to teaching geography, mainly at the secondary school and higher education level. Focusing on a range of current topics, different methods, techniques, materials, applications, and approaches to geography education with a regional Central European perspective, the book makes an original contribution to the field. Most of the chapters aims at the practical development of the themes such as geography curriculum (Part I), global education, inquiry-based education, project-based learning, case studies, powerful teaching (Part II), using of information and communication technologies (Part III) in geography teaching. The final part (Part IV) covers some geopolitical, and socio-geographical aspects of the aforementioned Central European former communist countries from the point of view how to teach them with various methods. Therefore, the book can appeal to many geography or science students, researchers and educators studying geography education around the world.

Since 1989 initial teacher training courses in England and Wales have included teacher preparation for taking a lead in a school subject area in their first appointment. There is no longer a place for a teacher newly qualified or not in primary schools whose sole responsibility is for his or her own class. A teacher must have specific specialist knowledge and expertise in particular subjects which must be shared with all staff.; This text contains the latest curriculum and assessment changes. It aims to help students and newly qualified teachers to understand the complexities of being a co-ordinator of the National Curriculum subjects in the early years of schooling and reports on best practice.
