'Digital Cities' looks at the impact of digital technologies on the design and analysis of cities, and how they might be used to help architects and designers operate at the urban scale, and design cities in a new way.

Guest-edited by Neil Leach What is the impact of digital technologies on the design and analysis of cities? For the last 15 years, the profound impact of computer-aided techniques on architecture has been well charted. From the use of standard drafting packages to the more experimental use of generative design tools and parametric modelling, digital technologies

have come to play a major role in architectural production. But how are they helping architects and designers to operate at the urban scale? And how might they be changing the way in which we perceive and understand our cities? Features some of the world's leading experimental practices, such as Zaha Hadid Architects, R&Sie(n), Biothing and Xefirotarch. Takes in exciting emerging practices, such as moh architects, kokkugia and THEVERYMANY, and work by students at some of the most progressive schools, such as the AA, Dessau Institute of Architecture and RMIT. Contributors include: Michael Batty, Benjamin Bratton, Alain Chiaradia, Manuel DeLanda, Vicente Guallart and Peter Trummer.

New Geographies journal aims to examine the emergence of the “geographic,” a new but for the most part latent paradigm in design today—to articulate it and to bring it to bear effectively on the social role of design. Although much of the analysis of this context in architecture, landscape, and urbanism derives from social anthropology, human geography, and economics, the journal aims to extend these arguments to the impact of global changes on the spatial dimension, whether in terms of the emergence of global spatial networks, global cities, or nomadic practices, and how these inform design practices today. Through essays and design projects, the journal aims to identify the relationship between the very small and the very large, and intends to open up discussions on the expanded role of the designer, with an emphasis on disciplinary reframings, repositionings, and attitudes.

A new era demands a new architecture: Vicente Guallart, pioneer and producer of new media on architecture, examines the technological, social and cultural changes inherent in our current

information society. He proposes, by means of his architecture, projects and writings, fresh ways for building in five distinct urban areas: the city, the periphery, the outskirts, the rural environment and cyberspace.

Strabo's Geography, completed in the early first century AD, is the primary source for the history of Greek geography. This Guide provides the first English analysis of and commentary on this long and difficult text, and serves as a companion to the author's The Geography of Strabo, the first English translation of the work in many years. It thoroughly analyzes each of the seventeen books and provides perhaps the most thorough bibliography as yet created for Strabo's work. Careful attention is paid to the historical and cultural data, the thousands of toponyms, and the many lost historical sources that are preserved only in the Geography. This volume guides readers through the challenges and complexities of the text, allowing an enhanced understanding of the numerous topics that Strabo covers, from the travels of Alexander and the history of the Mediterranean to science, religion, and cult.

The Pulitzer Prize-winning view of the continent, across the fortieth parallel and down through 4.6 billion years Twenty years ago, when John McPhee began his journeys back and forth across the United States, he planned to describe a cross section of North America at about the fortieth parallel and, in the process, come to an understanding not only of the science but of the style of the geologists he traveled with. The structure of the book never changed, but its

breadth caused him to complete it in stages, under the overall title *Annals of the Former World*. Like the terrain it covers, *Annals of the Former World* tells a multilayered tale, and the reader may choose one of many paths through it. As clearly and succinctly written as it is profoundly informed, this is our finest popular survey of geology and a masterpiece of modern nonfiction. *Annals of the Former World* is the winner of the 1999 Pulitzer Prize for Nonfiction.

The classic work on the evaluation of city form. What does the city's form actually mean to the people who live there? What can the city planner do to make the city's image more vivid and memorable to the city dweller? To answer these questions, Mr. Lynch, supported by studies of Los Angeles, Boston, and Jersey City, formulates a new criterion—imageability—and shows its potential value as a guide for the building and rebuilding of cities. The wide scope of this study leads to an original and vital method for the evaluation of city form. The architect, the planner, and certainly the city dweller will all want to read this book.
