Human Geography: Places and Regions in Global Context takes a fresh approach to human geography, reflecting the major changes that have recently been impressed on global, regional, and local landscapes. These changes include the globalization of industry, the rise of China and India, the upwelling of ethnic regionalisms on the heels of decolonization and the formation of new states, the rapid urbanization of the periphery and the physical restructuring of cities, the transformation of traditional agricultural practices, the trend toward transnational political and economic organizations, and the dramatic advances in information and communication technologies. Human Geography: Places and Regions in Global Context introduces the many new ideas, concepts, and theories that address these changes while also teaching the fundamentals of human geography: the principles, concepts, theoretical frameworks, and basic knowledge that are necessary to more specialized studies.

Urban regions have come under increasing pressure to adapt to the imperatives of mobility, including greater freedom of travel, rising trade volumes and global economic networks. Whereas urbanization was once characterized by the concentration of services and facilities, urban areas now have to ensure the exchange of goods, services and information in a much more complex, interrelated, highly competitive, and spatially dispersed environment. As a consequence, cities are challenged to ensure the functionality of infrastructure while mitigating negative environmental and social impacts. Cities, Regions and Flows brings together debates in a single volume to present a theoretical framework for understanding the changing relationship between places and movement. It analyses the significance of flows of goods for urban and regional development and emphasises the twin processes of integration and disintegration that result from goods movement within urban space. It discusses urban regions as nodes for organizing the exchange of goods, services and information against a background of socio-economic and technological change, as well as new patterns of urbanization. The new logistics concepts and practices that have been developed in response to these changes exert both integrative and disintegrative effects on cities and regions. It also considers how urban policies are dealing with related challenges concerning infrastructure provision, land use, local labour markets and environmental sustainability. Cities, Regions and Flows contains thoughtfully prepared case studies from five different continents on how cities manage to become part of value chains and how they strive for accessibility in an increasingly competitive environment. This book will be on interest to policy-makers and advanced classes in planning, geography, urban studies and transportation.

The authors maintain that regions are the outcomes of a set of twin forces of globalization and regionalization. Therefore, each regional chapter stresses the global systems of connection that drive unique regional processes, making regions different. By studying regions, students not only learn the critical elements of different places, but also come to understand the fundamental processes that drive change. The Fifth Edition discusses geographies of emerging regions, incorporates cutting-edge data visualizations and infographics, including Quick Response codes linking to online media, features a completely modernized cartography program, and much more.

This volume gathers a collection of the most seminal essays written by leading experts in the field, which identify or signal many of the changing directions of regional research in geography during the past fifty years. Various forms of 'new regionalism' or 'new regional geography' have emerged over the last several decades, especially in political and economic geography, but in general the region has been a concept in declining use. Despite this, the region has gained new currency in sub-areas of political and economic geography and a so-called 'new regionalism' has emerged in studies of the changing nature of the nation-state in a globalizing economy. Taken together, the essays in this volume provide the reader with a comprehensive overview of academic developments in this area of geographical research.

As political, economic, and environmental issues increasingly spread across the globe, the science of geography is being rediscovered by scientists, policymakers, and educators alike. Geography has been made a core subject in U.S. schools, and scientists from a variety of disciplines are using analytical tools originally developed by geographers. Rediscovering Geography presents a broad overview of geography's renewed importance in a changing world. Through discussions and highlighted case studies, this book illustrates geography's impact on international trade, environmental change, population growth, information infrastructure, the condition of cities, the spread of AIDS, and much more. The committee examines some of the more significant tools for data collection, storage, analysis, and display, with examples of major contributions made by geographers. Rediscovering Geography provides a blueprint for the future of the discipline, recommending how to strengthen its intellectual and institutional foundation and meet the demand for geographic expertise among professionals and the public.
