NAesten 200. Sa mange stater er der i verden. Der er mange slags -  
lige fra velfAerdsstater til fejlslagne stater og diktaturer. Men  
fAelles for alle stater er, at deres historie, tilblivelse og udvikling  
kan opsummeres af tre sma ord: magt, vold og politik.De tre ord  
udgor kernen i enhver stat. For staten vil bestemme, hvordan vi skal  
opfore os. Den straffer os, hvis vi bryder dens love, og den pastar  
endda, at dens beslutninger er i fAellesskabets interesse. Staten  
strAekker sin tilstedevAerelse lige til grAensen og ud i enhver pore  
af vort sociale liv, samtidig med at den kun kan eksistere, hvis vi

tror på den. På den måde er staten blevet vor tids Gud.

AllestedsnAervAerende, men alligevel fjern og fiktiv.Statens idehistorie. Magt, vold og politik viser tankerne om staten og dens tre uundvAerlige grundstoffer. Og den trAekker en rod trad gennem en rAekke afgørende fokuspunkter i dens lange og komplekse idehistorie. For bag borgerkrige og koncentrationslejre, hackere og pirater, liberalisme og konservatisme gemmer der sig altid en kamp for eller imod statens totalitAere herredomme.

Now in four convenient volumes, Field's Virology remains the most authoritative reference in this fast-changing field, providing definitive coverage of virology, including virus biology as well as

replication and medical aspects of specific virus families. This volume of Field's Virology: Emerging Viruses, 7th Edition covers recent changes in emerging viruses, providing new or extensively revised chapters that reflect these advances in this dynamic field.

Cells are by nature compelled to live in groups. They develop dependence over signaling cues received from their microenvironment, in particular from other cells, whether of their own "kind" or of a different type. Therefore, communicating with these cells is a critical aspect of their behavior and fate, as they live and die normally or as they undergo disease-related pathological changes, with dramatic repercussions. In this book, we have asked expert researchers in the field of Intercellular Communication in Cancer to provide chapters on different aspects of interaction

between neighboring cells, in the context of cancer diseases. We have specifically focused our efforts on membrane-to-membrane contact-based rather than growth factors-mediated modes of intercellular communications. The contributing authors provide an extensive overview of their respective area of specialization, with an in-depth discussion of the molecular mechanisms of cell-cell interactions, the impact on tumor progression and response to therapies, as well as the cancer diagnostic value of this scientific information. This book aims to introduce essential aspects of the normal and pathological cellular fate and homeostasis to both scientists and clinicians, and also to provide established researchers with an update on the novelties and future directions this expanding field is witnessing.

Frontiers in Clinical Drug Research - Anti-Cancer Agents is a book series intended for pharmaceutical scientists, postgraduate students and researchers seeking updated and critical information for developing clinical trials and devising research plans in anti-cancer research. Reviews in each volume are written by experts in medical oncology and clinical trials research and compile the latest information available on special topics of interest to oncology researchers. The fourth volume of the book brings forth reviews on biomarkers and new drugs used for treating gastrointestinal cancer and breast cancer. The volume also covers the topics of adjuvant therapy, cancer nanodrugs and the role of adiponectin and dicycloplatin in cancer therapy.
