Jeppesen Airway Manual. Very Good: A book that has been read and does not look new, but is in excellent condition. No obvious damage to the book cover, with the dust jacket (if applicable) included for hard covers. No missing or damaged pages, no creases or tears, no underlining or highlighting of text, and no writing in the margins.

The updated 11th edition of the Aeronautical Chart User's Guide by the FAA is a great reference for novice pilots and professionals alike. Printed in full color with detailed examples, this book provides all the information students and pilots need to know about all the symbols and information provided on US aeronautical charts and chart navigation publications. Readers will find information on VFR charts, aeronautical chart symbols, helicopter route charts, flyway planning charts, IFR enroute charts, explanation of IFR enroute terms and symbols, Terminal Procedure Publications (TPPs), explanation of TPP terms and symbols, airspace classifications, and an airspace class table.

Now spiral bound! Features a step-by-step description of course contents. Includes: Lesson objectives \* Flight and ground time allocations for all lessons, and \* Coordination of other academic support materials with your flight training. ISBN 0-88487-240-8

The Federal Aviation Administration (FAA) has published the Private Pilot - Airplane Airman Certification Standards (ACS) document to communicate the aeronautical knowledge, risk management, and flight proficiency standards for the private pilot certification in the airplane category, single-engine land and sea; and multiengine land and sea classes. This ACS incorporates and supersedes the previous Private Pilot Practical Test Standards for Airplane, FAA-S-8081-14. The FAA views the ACS as the foundation of its transition to a more integrated and systematic approach to airman certification. The ACS is part of the safety management system (SMS) framework that the FAA uses to mitigate risks associated with airman certification training and testing. Specifically, the ACS, associated guidance, and test question components of the airman certification system are constructed around the four functional components of an SMS: Safety Policy that defines and describes aeronautical knowledge, flight proficiency, and risk management as integrated components of the airman certification system; Safety Risk Management processes through which internal and external stakeholders identify and evaluate regulatory changes, safety recommendations and other factors that require modification of airman testing and training materials; Safety Assurance processes to ensure the prompt and appropriate incorporation of changes arising from new regulations and safety recommendations; and Safety Promotion in the form of ongoing engagement with both external stakeholders (e.g., the aviation training industry) and FAA policy divisions. The FAA has developed this ACS and its associated guidance in collaboration with a diverse group of aviation training experts. The goal is to drive a systematic approach to all components of the airman certification system, including knowledge test question development and conduct of the practical test. The FAA acknowledges and appreciates the many hours that these aviation experts have contributed toward this goal. This level of collaboration, a hallmark of a robust safety culture, strengthens and enhances aviation safety at every level of the airman certification system.

A vital resource for pilots, instructors, and students, from the most trusted source of aeronautic information.
