Book description. Make Better Decisions While Managing Projects! Decision-making is critical in project management. Lack of decision-making knowledge, avoidable mistakes, and improper definitions can negatively impact your company's ability to generate profit. The Project Manager's Guide to Making Successful Decisions is a practical handbook that focuses on the significance of project decision-making skills that will all you to reach workable and effective results.

An important activity for an organization's leaders and managers is making decisions associated with problem-solving. Making decisions is a complex endeavor where choices are made from courses of action where resources are limited and in the presence of constraints. Written as a guide, this book offers a quantitative approach to decision-making. The process of decision-making is presented from a holistic point of view. This book offers a basic understanding of the issues and processes involved in decision-making by presenting the tools associated with problem analysis, tools that enable developing choices, as well as tools used to normalize judgment criteria achievement so that they are comparable across measures using different scales. Several solution methods for decision problems that have one evaluation criterion are explained first. Methods for problems with multiple criteria for evaluating alternate solutions are discussed as well. The multiple criteria methods include those that do not require any explicit preference or trade-off information from the decision-maker and those that do require the decision-maker's preference or trade-off information. The intended audience of the book includes technical and nontechnical professionals, managers, and supervisors at all levels, and engineering and business educators. The book would also be useful to undergraduate students, beginning graduate students, and recent graduates of professional programs, or in mathematics, computer science, natural sciences, and humanities.

The sign of a smart IS decision... The sign of a smart decision about information systems isn't based on technical details alone; it's based on how well that decision contributes to the overall success of the business. If you want to make your firm's investment in IS really pay off, you need to approach IS from a truly managerial perspective. Now with Paul Gray's Manager's Guide to Making Decisions About IS, you'll learn how IS can help the organization as a whole, and how to make key decisions on whether to undertake, upgrade, or decommission large software systems. You'll also learn about the capabilities of IS, such as the many uses of a data warehouse and using IS to gain competitive intelligence. See the big picture. The Manager's Guide to Making Decisions About IS first focuses on big picture issues, such as hardware, software, and the Internet; strategic uses of IS; aligning IS with the business; types of applications; and inter-organizational systems. Make decisions on big-ticket applications. Gray then provides you with essential knowledge that will help you make informed decisions on big-ticket applications, including electronic commerce, enterprise requirements planning (ERP), customer relationship management (CRM), data warehousing, knowledge management, and business intelligence. Explore current IS issues. Finally, the Manager's Guide to Making Decisions About IS examines the IS issues that managers are currently facing in today's business, including outsourcing, systems integration, supply chain, people issues, mergers and acquisitions, infrastructure, and privacy, security, and ethics. Armed with this knowledge, you'll have the confidence and understanding you need to sign-off on IS decisions that will have a valuable impact on your organization.

Everybody has to make decisions—they are unavoidable. Yet we receive little or no education or training on how to make decisions. Business decisions can be difficult: which people to hire, which product lines or facilities to expand and which to sell or shut down, which bid or proposal to accept, which process to implement, how much R&D to invest in, which environmental projects should receive the highest priority, etc. This book gives you all the tools you need to... • clarify and reach alignment on goals and objectives and understand trade-offs in reaching those goals, • develop and examine alternatives, • systematically analyze the effects of risk and uncertainty, and • maximize the chances of achieving your goals and objectives. Success (getting what you want) depends on luck and good decision making. You can't control your luck, but you can maximize your odds by making the best possible decisions, and this book gets you there. Broadly speaking, this book organizes and presents otherwise formal decision-making tools in an intuitively understandable fashion. The presentation is informal, but the concepts and tools are research-based and formally accepted.

Learn all you need to know about making effective decisions, from defining objectives to developing fail-safe strategies. Making Decisions shows you how to reassess your own decision-making skills and oversee the resolutions made by others, plus it provides practical techniques for you to try when making decisions. Power tips help you handle real-life situations and develop the first-class decision-making skills that are the key to a productive and informed workplace. "This book is about the creative and messy process of making environmental management decisions. The approach we describe is called Structured Decision Making, a distinctly pragmatic label given to ways for helping individuals and groups think through tough multidimensional choices characterized by uncertain science, diverse stakeholders, and difficult tradeoffs. This is the everyday reality of environmental management, yet many important decisions currently are made on an ad hoc basis that lacks a solid value-based foundation, ignores key information, and results in selection of an inferior alternative. Making progress—in a way that is rigorous, inclusive, defensible, and transparent—requires combining analytical methods drawn from the decision sciences and applied ecology with deliberative insights from cognitive psychology, facilitation, and negotiation. We review key methods and discuss case-study examples based in our experiences in communities, boardrooms, and stakeholder meetings. Our goal is to lay out a compelling guide that will change how you think about making environmental decisions"—
