denen die Geographie mit ihren Arbeitsrichtungen eine Vorrangstellung einnimmt, weil sie ...

Der Wandel der Energiewirtschaft hin zu mehr Stromerzeugung aus erneuerbaren Energien spielt sich in physisch-materieller Hinsicht in Landschaften ab. Er wird von Praktikern der Raum- und Landschaftsplanung teils mit Skepsis und teils mit positiven Erwartungen begleitet. In dem Band wird den Fragen nachgegangen, welche Folgen die Energiewende auf die ästhetische Bewertung von Landschaften hat, welche neuen Akteurskonstellationen entstanden sind und welche Konflikte um das

Acces PDF Neue Energielandschaften Neue Perspektiven Der Landschaftsforschung

Landschaftsbild, die Landnutzung oder die Verteilung von Macht zu verzeichnen sind. Es werden die Konsequenzen der Umbrüche hin zu „neuen Energielandschaften“ für die Landschaftsforschung, aber auch für räumliche Planung und Governance thematisiert.

Improving the dynamic relationship between nature and human well-being is a pressing issue of our time. Landscapes embody this tight interconnectedness and serve as unique sustainability learning hubs, showcased by the global rise of place-based and holistic landscape stewardship initiatives. Incorporating these exciting developments, this book explores the principles of landscape stewardship and their function in fields such as

Acces PDF Neue Energielandschaften Neue Perspektiven Der Landschaftsforschung

agriculture, ecological restoration and urban green infrastructure. It provides insights into the challenges and the potential of landscape stewardship and identifies future paths for the science and practice of landscape-related sustainability efforts. Aligning analytical perspectives with practical applications, it brings together contributions from leading scholars and innovative models of landscape stewardship from all around the world, making it an essential resource for anyone interested in developing sustainable human-nature relationships.

The capital of Louisiana, Baton Rouge, has been the scene of fundamental changes in recent decades. In the context of the tripole of petrochemistry, Louisiana State University

(LSU) and public administration (especially of the state of Louisiana), which has been fully developed since the end of the 1920s, general processes (such as the transition from modern to post-modern spatial development) mix with specific local and regional characteristics and logics, also in dealing with spaces (such as the eccentric location of the downtown area, the limited influence of spatial planning). The result is a social-spatial formation of a 'multivillage metropolis'. The investigation of this 'multivillage metropolis' follows a neopragmatic approach that triangulates different theories, methods, data and researcher perspectives. In the past decades, the discussion about theoretical approaches to the topic of 'landscape' has increased. This book presents the currently discussed theoretical approaches to landscape and shows its potentials and limits. The theoretical approaches are discussed on the basis of current questions, such as socialisation and the hybridisation of landscape, and combined with empirical results. This is followed by a discussion of the landscape policy operationalisation of theoretical considerations and empirical findings.

This book offers a comprehensive and detailed overview of

successful renewable energy projects in the European Union. After the decision of several European governments to change energy policies in favor of renewable energy sources, the number of nuclear power plants as well as overall coal production have decreased significantly already. Conrad Kunze and Sören Becker present recent energy projects that have successfully managed the change towards sustainable energy while functioning within local economies and adhering to the principles of participation, collective property, and ecologic awareness. Using a selection of 15 examples, the authors showcase the already existing parallel universe of 'small alternatives' and argue that, if used properly, renewable energy projects can not only lead the way in the fight against climate change but

facilitate societal change on an even larger scale.

German Edition

Angela Pohlmann analyses the social embeddedness of renewable energy production. The author challenges tendencies in the existing literature to homogenize community energy projects. Energy production instead is analyzed as an outcome of complex situations within which dynamic negotiation processes unfold. By combining Theodore Schatzki ' s practice-theoretical approach with Adele Clarke ' s situational analysis the focus is shifted from practices as stabilized and routinized forms of human behavior onto their dynamic and negotiated character.

This is the first book to explore ways of conceptualizing

Acces PDF Neue Energielandschaften Neue Perspektiven Der Landschaftsforschung

Germany's ongoing energy transition. Although widely acclaimed in policy and research circles worldwide, the Energiewende is poorly understood in terms of social science scholarship. There is an urgent need to delve beyond descriptive accounts of policy implementation and contestation in order to unpack the deeper issues at play in what has been termed a 'grand societal transformation.' The authors approach this in three ways: First, they select and characterize conceptual approaches suited to interpreting the reordering of institutional arrangements, socio-material configurations, power relations and spatial structures of energy systems in Germany and beyond. Second, they assess the value of these concepts in describing and explaining energy transitions, pinpointing their relative

Acces PDF Neue Energielandschaften Neue Perspektiven Der Landschaftsforschung

strengths and weaknesses and exploring areas of complementarity and incompatibility. Third, they illustrate how these concepts can be applied – individually and in combination – to enrich empirical research of Germany ' s energy transition.

This book examines the power definiteness of landscape from a social constructivist perspective with a particular focus on the importance of aesthetic concepts of landscape in development. It seeks to answer the question of how societal notions of landscape emerge, how they are individually updated and how these ideas affect the use and design of physical space. It also analyzes how physical manifestations of societal activity impact on understandings

Acces PDF Neue Energielandschaften Neue Perspektiven Der Landschaftsforschung

of individual and societal landscapes and addresses the essential aspect of the social construction of landscape, cultural specificity, which in turn is discussed in the context of the expansion of a western landscape concept. The book offers an unprecedented, comprehensive and detailed examination of societal power relations in the context of landscape development. The numerous case studies from the physical manifestation of modern spatial planning in the United States, the power discourses concerning the design of model railway landscapes, and the medial production of stereotypical landscape notions shed light on the complex and multilayered interactions of collective and individual landscape references. It is a valuable resource for

Acces PDF Neue Energielandschaften Neue Perspektiven Der Landschaftsforschung planners and philosophers. Raumfragen Stadt Region Landschaft German Edition

Resilience is one of the most important concepts in contemporary sociology. This volume offers a broad overview over the different theories and concepts of this category focusing on the cultural and political aspects of resilience.
