People need a plumb line for Truth. People need evidence for the true history of spirituality. The crux of the matter is the cross. The resurrection is a reality. The heart of the matter is the condition of people's hearts and we need to be aware of our standing with the Doorman. The Doorman to Heaven sends readers an invitation to the Banquet, emphasizing the importance of responding. A relationship quiz examines the reader's standing with the Doorman, and gives a description of the alternative to accepting the Doorman's offer. Through The Doorman to Heaven, we see a glimpse of the Doorman through His Book and discover His ways as explained therein. What is His Presence like? The Doorman to Heaven gives a comforting description of where our loved ones who have joined His family spend their time after leaving this earth. Share it with friends and relatives whose eternal standing hasn't been clearly decided, and those struggling with everyday realities. The following is taken from the Appendix of The Doorman to Heaven. The Bible says in Romans 10:9, "If you confess with your mouth that Jesus is Lord and believe in your heart that God raised Him from the dead, you will be saved." 1. Admit you are a sinner. 2. Be willing to turn from sin (repent). 3. Believe that Jesus Christ died for you, was buried and rose from the dead. 4. Through prayer, invite Jesus into your life to become your personal Savior. Dear God, I am a sinner and need forgiveness. I believe that Jesus Christ shed His precious blood and died for my sin. I am willing to turn from sin. I now invite Christ to come into my heart and life as my personal Savior. If you " ve accepted Jesus Christ as your own personal Savior, then you will want to do the following: 1. Read your Bible every day to get to know Christ better. 2. Talk to God in prayer every day. 3. Be baptized, worship, fellowship, and serve with other Christians where Christ is preached and the Bible is the final authority. 4. Tell others about Christ.

The first guide to planning and performing a physical penetration test on your computer's security Most IT security teams concentrate on keeping networks and systems safe from attacks from the outside-but what if your attacker was on the inside? While nearly all IT teams perform a variety of network and application penetration testing procedures, an audit and test of the physical location has not been as prevalent. IT teams are now increasingly requesting physical penetration tests, but there is little available in terms of training. The goal of the test is to demonstrate any deficiencies in operating procedures concerning physical security. Featuring a Foreword written by world-renowned hacker Kevin D. Mitnick and lead author of The Art of Intrusion and The Art of Deception, this book is the first guide to planning and performing a physical penetration test. Inside, IT security expert Will Allsopp guides you through the entire process from gathering intelligence, getting inside, dealing with threats, staying hidden (often in plain sight), and getting access to networks and data. Teaches IT security teams how to break into their own facility in order to defend against such attacks, which is often overlooked by IT security teams but is of critical importance Deals with intelligence gathering, such as getting access building blueprints and satellite imagery, hacking security cameras, planting bugs, and eavesdropping on security channels Includes safeguards for consultants paid to probe facilities unknown to staff Covers preparing the report and presenting it to management In order to defend data, you need to think like a thief-Let Unauthorised Access show you how to get inside.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs

The current Symbian Press list focuses very much on the small scale features of Symbian OS in a programming context. The Architecture Sourcebook is different. It's not a how-to book, it's a 'what and why' book. And because it names names as it unwinds the design decisions which have shaped the OS, it is also a 'who' book. It will show where the OS came from, how it has evolved to be what it is, and provide a simple model for understanding what it is, how it is put together, and how to interface to it and work with it. It will also show why design decision were made, and will bring those decisions to life in the words of Symbian's key architects and developers, giving an insider feel to the book as it weaves the "inside story" around the architectural presentation. The book will describe the OS architecture in terms of the Symbian system model. It will show how the model breaks down the system into parts, what role the parts play in the system, how the parts are architected, what motivates their design, and how the design has evolved through the different releases of the system. Key system concepts will be described; design patterns will be explored and related to those from other operating systems. The unique features of Symbian OS will be highlighted and their motivation and evolution traced and described. The book will include a substantial reference section itemising the OS and its toolkit at component level and providing a reference entry for each component.
