"Provide an approachable, superbly written introduction to economics that allows all types of students to quickly grasp economic concepts and build a strong foundation with Mankiw's popular Principles of economics, 8E. The most widely-used text in economics classrooms worldwide, this book covers only the most important principles to avoid overwhelming students with excessive detail. Extensive updates feature relevant examples to engage students. MindTap and Appia digital course solutions are available to improve student engagement and retention with powerful student-focused resources. Within MindTap, students can use the highly acclaimed Graph Builder and Adaptive Test Prep features. All content has been carefully crafted around understanding student needs at key moments in your course. A team of award-winning teaching economists have added more relevance, engagement, and interactivity to teaching resources in this book's ancillary package, already the most commanding in the industry."--

Watch this video interview with Greg Mankiw and Larry Ball discussing the future of the intermediate macroeconomics course and their new text. Check out preview content for Macroeconomics and the Financial System here. The financial crisis and subsequent economic downturn of 2008 and 2009 was a dramatic reminder of what economists have long understood: developments in the overall economy and developments in the financial system are inextricably intertwined. Derived and updated from two widely acclaimed textbooks (Greg Mankiw's Macroeconomics, Seventh Edition and Larry Ball's Money, Banking, and the Financial System), this groundbreaking text is the first and only intermediate macroeconomics text that provides substantial coverage of the financial system.

Now firmly established as one of the leading economics principles texts in the UK and Europe, this exciting new fourth edition of Economics by N. Gregory Mankiw (Harvard University) and Mark P. Taylor (Washington University), has been fully updated. New topics have been added in including theories on, for example, Marxist and Feminist theories on labour giving wider context to economic issues. A new chapter on Issues in Financial markets has been added covering the financial crisis and its causes and the final chapter has been updated to reflect the post-crisis world and how theories of the crisis have emerged.

Mankiw's masterful text covers the field as accessibly and concisely as possible, in a way that emphasizes the relevance of macroeconomics's classical roots and its current practice. Featuring the latest data, new case studies focused on recent events, and a number of significant content updates, the Seventh Edition takes the Mankiw legacy even further. It offers the clearest, most up-to-date, most accessible course in macroeconomics in the most concise presentation possible.

Perhaps Piet Creutzberg is and essentially always has been an artisan and an admirer of the best in craftsmanship. The emphasis on the practical side of things seems to pervade whatever he undertook during half a century. Anyway, it is as a trader of the historical craft - wielding a Chinese abacus or an electronic computing device- that, from about 1965 onwards, an increasing number of younger students of Indonesian social, economic and political history have met him in the depot of the 20th century colonial archives in The Hague or at the Royal Tropical Institute in Amsterdam. Of the scores of Dutch, Indonesian, British, Scandinavian, German, American, Australian and Japanese historians he inspired and advised some were writing a master's thesis, others had already made part of their academic career in Indonesian history or related topics, but most of them were in the critical phases of collecting published or archival materials with a view to their incorporation in doctoral dissertations.

Corporate Finance, by Ross, Westerfield, and Jaffe is a popular textbook that emphasizes the modern fundamentals of the theory of finance, while providing contemporary examples to make the theory come to life. The authors aim to present corporate finance as the working of a small number of integrated and powerful intuitions, rather than a collection of unrelated topics. They develop the central concepts of modern finance: arbitrage, net present value, efficient markets, agency theory, options, and the trade-off between risk and return, and use them to explain corporate finance with a balance of theory and application. The well-respected author team is known for their clear, accessible presentation of material that makes this text an excellent teaching tool. Brad Jordan, known for his successful work on the RWJ Fundamentals and Essentials books, contributed to this edition. His influence will be seen particularly in the writing style with smoother coverage of topics, and the increased quality in the problem material.
