The Canadian Intellectual Property Office (CIPO) recently released new guidelines on patentable subject matter and examples applying the new guidelines to computer-implemented inventions, medical diagnostic methods and medical uses. The recency of CIPO's new guidelines and examples necessarily means that there is uncertainty in how the new guidelines will be applied in practice and over time.

Perspectives on Patentable Subject Matter brings together leading scholars to offer diverse perspectives on the question of which types of subject matter are even eligible for patent protection, setting aside the widely known requirement that a claimed invention avoid the prior art and be adequately disclosed. Some leading commentators and policy-making bodies and individuals envision patentable subject matter to include anything under the sun made by humans, others envision a range of restrictions for particular fields of endeavor, from business methods and computer software to matters involving life, such as DNA and methods for screening or treating disease. Employing approaches that are both theoretically rigorous and grounded in the real world, this book is well suited for practicing lawyers, managers, lawmakers, and analysts, as well as academics researching or teaching in law schools, business schools, public policy schools, and in economics and political science departments.

"Perspectives on Patentable Subject Matter brings together leading scholars to offer diverse perspectives on one of the most pressing issues in patent law: the basic question about which types of subject matter are even eligible for patent protection, setting aside the widely known requirement that a claimed invention avoid the prior art and be adequately disclosed. Some leading commentators and policy-making bodies and individuals envision patentable subject matter to include anything under the sun made by humans, whereas other leaders envision a range of restrictions for particular fields of endeavor, from business methods and computer software to matters involving life, such as DNA and methods for screening or treating disease. Employing approaches that are both theoretically rigorous and grounded in the real world, this book is well suited for practicing lawyers, managers, lawmakers, and analysts, as well as academics conducting research or teaching a range of courses in law schools, business schools, public policy schools, and in economics and political science departments, at either the undergraduate or graduate level!"--

This text addresses critical and timely questions in patent law from a truly global perspective, with contributions from leading patent law scholars from various countries and various disciplines. The rich scholarship featured reflects on a wide range of perspectives, offering insights and new approaches to evaluating key institutional, economic, doctrinal, and practical issues that are at the forefront of efforts to reform the global patent system, and to reconfigure geo-political interests in on-going multilateral, trilateral, and bilateral initiatives.

Nano-Biopesticides Today and Future Perspectives is the first single-volume resource to examine the practical development, implementation and implications of combining the environmentally aware use of biopesticides with the potential power of nanotechnology. While biopesticides have been utilized for years, researchers have only recently begun exploring delivery methods that utilize nanotechnology to increase efficacy while limiting the negative impacts traditionally seen through the use of pest control means. Written by a panel of global experts, the book provides a foundation on nano-biopesticide development paths, plant health and nutrition, formulation and means of delivery. Researchers in academic and commercial settings will value this foundational reference of insights within the biopesticide realm. Provides comprehensive insights, including relevant information on environmental impact and safety, technology development, implementation, and intellectual property Discusses the role of nanotechnology and its potential applications as a nanomaterial in crop protection for a cleaner and greener agriculture Presents a strategic, comprehensive and forward-looking approach

Today, it has been said, the world is "flat," as online media allow information to move easily from point to point across the earth. International legal differences, however, are increasingly affecting the ease with which data and ideas can be shared across nations. Copyright law, for example, affects the international flow of materials by stipulating who has the right to replicate or to share certain kinds of content. Similarly, perspectives on privacy rights can differ from nation to nation and affect how personal information is shared globally. Moreover, national laws can affect the exchange of ideas by stipulating the language in which information must be presented in different geopolitical regions. Today's technical communicators need to understand how legal factors can affect communication practices if they wish to work effectively in global contexts. This collection provides an overview of different legal aspects that technical communicators might encounter when creating materials or sharing information in international environments. Through addressing topics ranging from privacy rights and information exchange to the legalities of business practices in virtual worlds and perspectives on authorship and ownership, the contributors to this volume examine a variety of communication-based legal issues that can cause problems or miscommunication in international interactions. Reviewing such topics from different perspectives, the authors collectively provide ideas that could serve as a foundation for creating best practices on or for engaging in future research in the area of legal issues in international settings.

Economic development is the most important agenda in the international trading system today, as demonstrated by the Doha Development Agenda (DDA) adopted in the current multilateral trade negotiations of the World Trade Organization (the Doha Round). This book provides a relevant discussion of major international trade law issues from the perspective of development in the following areas: general issues on international trade law and economic development; and specific law and development issues in World Trade Organization, Free Trade Agreement and regional initiatives. This book offers an unparalleled breadth of coverage on the topic and diversity of authorship, as seventeen leading scholars contribute chapters from nine major developed and developing countries, including the United States, Canada, Japan, China (including Hong Kong), South Korea, Australia, Singapore and Israel.
