Managers are increasingly concerned with the typical methods available for organizational performance measurement and control. Research into performance measurement, within the field of innovation management, has been variously approached through frameworks for performance measurement in general (for example, the Balanced Scorecard by Norton and Kaplan), R&D performance management, and surveys on in-use Key Performance Indicators (KPIs). It is striking, however, that almost no research has focused explicitly on the performance measurement of research activities, or indeed tried to develop a systematic approach to setting KPIs for specific research goals. This work, in co-operation with ABB Research, Deutsche Telekom AG Laboratories, EMC2 Advanced Technology Solutions, IBM Research, Intel Research, Microsoft Research, Philips Research, and SAP Research, develops a systematic approach to performance measurement for industrial research organizations in innovation-driven companies. The following questions are addressed: (1) Which research goals do research departments have? (2) Which KPIs do they use to monitor the achievement of these goals? (3) Is there a systematic best-practice approach to selecting KPIs for performance goals? The outcome is a complete set of eleven performance clusters, such as the transfer of research results to the development or other organizational departments, and each cluster has its own set of KPIs. The eleven clusters are: Technology Transfer, Future Business Opportunities, Technical Achievements, Intellectual Property, Operational Excellence, Talent Pool, Image, Publications, Presence in Scientific Community, Collaboration with Academia, Collaboration with Partners and Customers. This work led to the creation of the Institute for Industrial Research Performance Management that provides ongoing research and insights for managers of industrial research organizations.

For firms and other organizations, innovation has become a means of anticipating and managing major changes in their external context and overcoming societal challenges such as sustainable development. As a result, they must innovate repeatedly and continuously. This book explores the multiple facets of innovation project management, defined as the set of activities implemented to bring into being and successfully complete one or several innovation projects. It combines research experience, in cooperation with practitioners, and a theoretical, transversal and global overview inspired from different research streams. The author develops methodologies and frameworks that might be put into practice, provides a case study of research conducted with an air systems manufacturing firm, and outlines avenues for further reflection on innovation project management practice improvement.

Research and Development is the vehicle by which organizations and economies create opportunity, innovation and secure a stream of future products and services.These outcomes are all critically important sources of sustainability in a world that is changing faster than most companies can keep up.The challenge behind them is the fundamental unpredictability of R&D; which is why effective project management is so important. Ron Basu's Managing Projects in Research and Development

explains how and why project management can provide a means of helping to plan, organise and control multi-disciplinary research activities without stifling innovation. Combining research with practical examples and experience from a career that has included blue chip organizations such as GSK, GlaxoWellcome and Unilever, Ron Basu offers a rigorous guide to the fundamentals of R&D project management including project lifecycle management, risk management, cost, time quality and other success measures as well as the keys to operational excellence in this complicated world.
