Key Methods in Second Language Acquisition Research

Abstract. Since its inception in the 1960s, the field of second language acquisition (SLA) has sought to document and explore how children and adults acquire a nonnative language. Researchers have investigated the linguistic, cognitive, social, contextual, psychological, and neurobiological characteristics of second language (L2) learning, processing, and use.

Similar sequences of acquisition have been found for a wide range of structures in a range of languages (see e.g. Ellis 1994; Mitchell & Myles 1998). After the 1980s the SLA research agenda focused on (a) documenting the route followed by learners in a range of structures and languages - although English remains by far the most studied L2, and increasingly (b) explaining this route which, if ...

Second-language acquisition (SLA), second-language learning or L2 (language 2) acquisition, is the process by which people learn a second language. Second-language acquisition is also the scientific discipline devoted to studying that process. The field of second-language acquisition is a sub-discipline of applied linguistics, but also receives research attention from a variety of other ...

Studies in Second Language Acquisition | Cambridge Core

Research in this area (called "second language acquisition" in academia) suggests that there are three key elements to learning a new language. The first is comprehensible input, which is a fancy way of saying being exposed to (hearing or reading) something in the new language and learning to understand it.

This volume addresses salient theoretical issues concerning the validity of research methods in second-language acquisition, and provides critical analysis of contextualized versus sentence-level production approaches. The contributors present their views of competence versus performance, the nature of language acquisition data, research design, the relevance of contextualized data collection and interpretation, and the desirability of a particularistic nomothetic theoretical paradigm versus more comprehensive consideration of multiple realities and complex influencing factors. This book presents varying and antithetical approaches to the issues, bringing together the thinking and approaches of leading researchers in language acquisition, language education, and sociolinguistics in an engaging debate of great currency in the field.

Key Methods in Second Language Acquisition Research is a book written to help novice teachers and undergraduate students developing an awareness and understanding of the key methodological frameworks and processes used in second language research. The book should also help readers generating ideas and researchable questions and adopting particular research methods and procedures to collect and analyse data. The book is divided into three main parts: Key Stages in Second Language Research, Key Methodological Frameworks, and Mixed Frameworks and Psycholinguistics Methods.

Addressing a rapidly growing interest in second language research, this hands-on text provides students and researchers with the means to understand and use current methods in psycholinguistics. With a focus on the actual methods, designs, and techniques used in psycholinguistics research as they are applied to second language learners, this book offers the practical guidance readers need to determine which method is the best for what they wish to investigate as well as the tools that will enhance their research. Each methods chapter is written by a leading expert who describes, discusses, and comments on how a method is used and what its strengths and limitations are for second language research. These chapters follow a specific format to ensure cohesion and a predictable structure across all chapters. The chapters also inform the novice researcher on such key issues as ease of use, costs, potential pitfalls, and other related matters, each of which impact decisions that researchers make about the paths they take. With the most reliable information available from experienced researchers, Research Methods in Second Language Psycholinguistics is an essential resource for anyone interested in conducting second language research using psycholinguistic methods.

Understanding how people learn and fail to learn second and foreign languages is increasingly recognised as a critical social and psycholinguistic issue. Second languages are vitally important to diverse groups of people, ranging from refugees to college students facing foreign language requirements. This book provides a synthesis of empirical findings on second and foreign language learning by children and adults, emphasising the design and execution of appropriate research.

Specifically targeted towards the needs of a second language research audience, Second Language Research: Methodology and Design addresses basic issues related to research design, providing step-by-step instructions for how to carry out studies. This up-to-date text includes chapters that cover identifying research problems and questions; selecting elicitation measures; dealing with ethical issues related to data gathering; validity and reliability in research; research in second and foreign language classroom contexts; data description and coding; and data analysis. Also included is a chapter on the much needed and rarely addressed topic of writing up SLA research, giving concrete suggestions about preparing for publication. Principles of both qualitative and quantitative research are discussed in the context of design issues. Throughout the book, examples from applied linguistics, second language acquisition, and TESOL are provided. Helpful discussion and data-based skill-building exercises at the end of each chapter promote better understanding of the principles discussed. A glossary outlines the key terms in second language research. Second Language Research: Methodology and Design is an ideal textbook for introductory and advanced classes in second language research methods, as well as classes in related areas, for example, TESOL research methods.

Advancing Quantitative Methods in Second Language Research is the first hands-on guide to conducting advanced research methods in the fields of applied linguistics and second language studies. While a number of texts discuss basic quantitative research methodology, none focus exclusively on providing coverage of alternative advanced statistical procedures in second language studies from a practical approach. The text is bookended by discussions of these advanced procedures in the larger context of second language studies, debating their strengths, weaknesses, and potential for further research; the remaining chapters are how-to sections, each chapter following the same organization, on a wide variety of advanced research methods. By offering much-needed coverage on advanced statistical concepts and procedures, with an eye toward real-world implementation, Advancing Quantitative Methods in Second Language Research enhances the methodological repertoire of graduate students and researchers in applied linguistics and second language studies. Using Priming Methods in Second Language Research is an accessible introduction to the use of auditory, semantic, and syntactic priming methods for second language (L2) processing and acquisition research. It provides a guide for the use, design, and implementation of priming tasks and an overview of how to analyze and report priming research. Key principles about auditory, semantic, and syntactic priming are introduced, and issues for L2 researchers to consider when designing priming studies are pointed out. Empirical studies that have adopted priming methods are highlighted to illustrate the application of experimental techniques from psychology to L2 processing and acquisition research. Each chapter concludes with follow-up questions and activities that provide additional reinforcement of the chapter content, while the final chapter includes data sets that can be used to practice the statistical tests commonly used with priming data.

"This timely volume provides up-to-date overviews of methods used in psycholinguistic research with second languages. Included are chapters on self-paced reading and listening, textual eye-tracking, visual world eye-tracking, ERPs, fMRI, translation recognition tasks, and cross-modal priming. Each contribution is authored by an expert researcher who offers experienced insight into not only the history of the method, but what is measured, how it is measured, issues in research and stimuli design, and the pros and cons of the method. These contributions are bookended by an introductory chapter on various models and issues that inform psycholinguistic inquiry into second language learning, and a final chapter that offers comments on the various methods described in addition to issues related to research design. Intended as a text to be used with advanced undergraduate and graduate students, Research Methods in Second Language Psycholinguistics will be useful to researchers wishing to understand more about the various methods represented and how they are used to investigate psycholinguistic processes in the second language context"--
