Some of the related areas are also discussed. Among others, they include problem solving in complex systems, judgmental and heuristic biases in decision making as well as characteristics of decision support systems in high risk industry. The inclusion of these topics clearly indicates the shift in attention of occupational safety from work activities on the shop floor to tasks of operators and supervisors in automated and semi-automated systems. The text will prove useful to students of psychology and human factors engineering. Additionally, it holds great utility for persons with an engineering background, such as industrial engineers, quality control engineers, system and design engineers and safety practitioners.
