Studying for certs is expensive. Crazy expensive! Also there is a plethora of information out there, where do you even start? Well, right here! What does my exam guide offer the 1000+ page books do not? Specific, targeted, distilled information that will be seen on the test. This guide follows along the knowledge domains set forth by (ISC)<sup>2</sup>, but throughout I focus on how to evaluate the questions. I don't waste time and space with wordy explanations or massive dry sections on things that aren't even tested on the exam. While I was writing this I kept my focus on one important element: you want to PASS! In order to pass you need to double down on a central set of knowledge and information and branch out from there. I try not to distract you with information you don't need and advice that will cause you to fail. Over the course of one year I was able to pass the Security+, Certified Ethical Hacker, and CISSP exams; I know how to take these tests. I credit my passage to my study methodology. With proper methodology and persistence you can

pass the CISSP too. Let me help you to get certified and get paid!
