The Globalisation of Modern Architecture: The Impact of Politics, Economics and Social Change on Architecture and Urban Design Since 1990 Hardcover - Unabridged, 1 July 2012 by Robert Adam (Author)

The Globalisation of Modern Architecture: The Impact of ...

Robert Adam's The Globalisation of Modern Architecture takes a compelling and broad-ranging look at the output of the architectural world, writes James Pallister. It may seem an unlikely choice of subject for an architect known for being a practitioner of – say it sotto voce – ‘traditional architecture’, but Robert Adam has completed an impressively comprehensive and compelling survey of contemporary social and political theory.

The Globalisation of Modern Architecture by Robert Adam

The Globalisation of Modern Architecture: the Impact of Politics, Economics and Social Change on Architecture and Urban Design Since 1990 Paperback - Unabridged, 1 Jun. 2013 by Robert Adam (Author)

The Globalisation of Modern Architecture: the Impact of ...

Part sociological theory, part political and economic history, The Globalisation of Modern Architecture by Professor Robert Adam explains how Western or North Atlantic Modernist architecture came to dominate world cities and commercial architecture in the late 20th and 21st century. It is a scholarly book in which Robert Adam steps aside from his own architectural preferences, and takes a broad and impartial look at the development and consequences of this global phenomenon which impacts on ...

The Globalisation of Modern Architecture Book - e-architect

Taking the break-up of the Soviet Union and the entry of Russia, China and India into the global market as the start of a new era of globalisation, Robert Adam compares new developments in architecture and urban design with major shifts in the balance of power since 1990.

The Globalisation of Modern Architecture

The globalisation of modern architecture: the impact of politics, economics and social change on architecture and urban design since 1900. The ideas behind globalisation have been developing since the dawn of the modern man, contrary to the notions that globalisation is often considered a fairly new development of the 20th century.

The Globalisation of Modern Architecture: The Impact of ...

Modern architecture progressed with faith in reason. It introduced the concept of internationalization in architecture, whereby designs of offices, schools, hospitals and housing have been based on multifunction. This style, however, has been fast replaced by postmodernism in which concepts are set on universally accepted ideologies.

Taking the break-up of the Soviet Union and the entry of Russia, China and India into the global market as the start of a new era of globalisation, Robert Adam compares new developments in architecture and urban design with major shifts in the balance of power since 1990. Based on the principle that design unavoidably follows social change, politics and economics, this analysis casts a new light on recent architecture. Starting with the lead up to events in the 1990s, links are established between the global dominance of the North Atlantic economies, architectural style and a dramatic increase in international architectural practice. The widely-observed homogeneity of the global consumer economy is examined in relation to branding, tourism and international competition between cities, and parallels are drawn with universal architectural and urban types, iconic architecture and the rise of the star architect. Contrasting pressures to maintain differences are identified in the break-up of nation states, identity politics, targeted marketing and environmentalism, and these are related to attempts to reinforce local identity through architecture and urban design. Using social, political and economic change as a guide to new directions in architecture and urban design, the book ends by tracing the changes in global power revealed by the 2008 Western financial crash and its immediate impact on the built environment. By comparing past patterns of cultural influence, the book speculates on how architecture and urban design may come to reflect wider global trends.

This is the first book ever to examine the architecture and urbanism of the Persian Gulf as a complete entity, dealing equally with conditions on the eastern Iranian shoreline as in Arabic countries on the western side. By inviting a range of architects and scholars to write about historical and contemporary influences on 14 cities along both Gulf coastlines, the book traces the changes in architecture and human settlement in relation to environmental factors and particularity of place. It provides an innovative contribution to the study of architecture and globalisation through a detailed investigation of this particular region, investigating how buildings and cities are being shaped as a result. A set of thematic essays at the end offer important insights into issues of globalisation, urbanism and environmental design, drawing from the experience of the Persian Gulf. The outcome is a unique record of the Gulf in the early-21st century at a point when global capitalism is making major inroads and yet questions of architectural design, climate change, ecological sustainability, cultural identity and so-called 'Facebook Democracy' are likewise shaking up the Middle Eastern region. The book thus offers a fresh reading of the architecture and urbanism of a fascinating and often contradictory region, while also showing how globalisation can be analysed in a more engaged and integrated manner.

The definitive introductory book on the theory and history of regionalist architecture in the context of globalization, this text addresses issues of identity, community, and sustainability along with a selection of the most outstanding examples of design from all over the world. Alex Tzonis and Liane Lefaivre give a readable, vivid, scholarly account of this major conflict as it relates to the design of the human-made environment. Demystifying the reasons behind how globalization enabled creativity and brought about unprecedented wealth but also produced new wastefulness and ecological destruction, the book also looks at how regionalism has also tended to confine, tearing apart societies and promoting destructive consumerist tourism.

"Poetic Significance" presents beautiful architectural photography, diagrams, and the history of the very rich and complex Vietnamese modernist architecture from the mid-century in Saigon, Vietnam. Vietnamese mid-twentieth-century modernist architecture made its way into the Vietnamese vernacular culture to be recreated and transformed by the ordinary people. Through their creations, this book tries to discern the modern architectural aesthetics of the Vietnamese people which reflects how the architecture of Vietnam, an ancient Southeast Asian culture, has appeared and developed in modern times. When asked about Vietnamese architectural identity, most people would associate Vietnamese identity with the period before the French colonisation, comprising the traditional architecture of wooden communal houses or imperial palaces. That is widely accepted. But less known, yet more significant, is that this very same identity of Vietnamese authenticity has made its way into modern times, surviving colonialism to thrive again in a new material reality. Vietnamese modernist architecture appeared in Saigon, the capital of South Vietnam during the Second Indochina War. It was a branch of modernism with a rich architectural vocabulary of various micro-climatic strategies. As a result, this architecture appears lighter, airier, more graceful and less monumental in comparison to global modernism. Unexpectedly, the ordinary Vietnamese people took this language and practiced it on their own in making their modernist shophouses. This created a modernist architecture without acknowledging it, and modernism then became a means, catalysed and enriched by the collectivity of the Vietnamese culture. It became a new tradition of building houses. And primary in this tradition is a distinctively vibrant and poetic taste. In response to the rationality of global modernism, the Vietnamese people realised a new branch of modernism that is intensively dense, yet vibrant, rich, abstract and thoroughly poetic. It demonstrated a focus on the feelings and the spirituality that architecture can have. This very special sensitivity of the Vietnamese people contrasted with global modernism. And this contrast is, in fact, the modern identity of Vietnamese architecture, rooted directly from Vietnamese traditional aesthetics. It deserves, therefore, a formal recognition and appreciation, especially domestically as globalisation raises questions of self-consciousness, authenticity and identity in Vietnam's society. Those who study, practice architecture or who are interested in design, art, history and culture will find that this book shows how modernism came to be in Vietnam and how it has been adopted by the people directly as their new vernacular architecture. Through simple yet frequently-used architectural elements like louvers, planters, pergolas, handrails, brise-soleil, columns, beams, etcetera, the Vietnamese people have crafted artworks of an authentic taste and a strong identity. Readers will find this work helpful as a handbook that exposes a bright, but hidden example for the world of how architecture, art and culture co-exist in southern Vietnam, and how rationality and spirituality are intertwined into human creations.

Using time as a unifying theme, this book critically analyses many of the key concepts in modern architecture and urban design, such as modernity, innovation, timelessness and sustainability. Drawing on the statements of contemporary architects and with reference to a wide range of sources from history, philosophy, sociology and anthropology, as well as studies in diverse subjects such as science fiction, colonialism and archaeology, the text provides a new perspective on much of the thinking behind contemporary design. In

addition, it develops original and practical theories on the meanings of modernity, the variable ageing of the environment, the central role of longevity in sustainability, the significance of authenticity in conservation, and the relationship between collective memory and tradition.

This major work provides the first comprehensive history of one of modernism's most defining and controversial architectural legacies: the 20th-century drive to provide 'homes for the people'. Vast programmes of mass housing – high-rise, low-rise, state-funded, and built in the modernist style – became a truly global phenomenon, leaving a legacy which has suffered waves of disillusionment in the West but which is now seeing a dramatic, 21st-century renaissance in the booming, crowded cities of East Asia. Providing a global approach to the history of Modernist mass-housing production, this authoritative study combines architectural history with the broader social, political, cultural aspects of mass housing – particularly the 'mass' politics of power and state-building throughout the 20th century. Exploring the relationship between built form, ideology, and political intervention, it shows how mass housing not only reflected the transnational ideals of the Modernist project, but also became a central legitimizing pillar of nation-states worldwide. In a compelling narrative which likens the spread of mass housing to a 'Hundred Years War' of successive campaigns and retreats, it traces the history around the globe from Europe via the USA, Soviet Union and a network of international outposts, to its ultimate, optimistic resurgence in China and the East – where it asks: Are we facing a new dawn for mass housing, or another 'great housing failure' in the making?

The Architecture of Neoliberalism pursues an uncompromising critique of the neoliberal turn in contemporary architecture. This book reveals how a self-styled parametric and post-critical architecture serves mechanisms of control and compliance while promoting itself, at the same time, as progressive. Spencer's incisive analysis of the architecture and writings of figures such as Zaha Hadid, Patrik Schumacher, Rem Koolhaas, and Greg Lynn shows them to be in thrall to the same notions of liberty as are propounded in neoliberal thought. Analysing architectural projects in the fields of education, consumption and labour, The Architecture of Neoliberalism examines the part played by contemporary architecture in refashioning human subjects into the compliant figures – student-entrepreneurs, citizen-consumers and team-workers – requisite to the universal implementation of a form of existence devoted to market imperatives.

Using time as a unifying theme, this book critically analyses many of the key concepts in modern architecture and urban design, such as modernity, innovation, timelessness and sustainability. Drawing on the statements of contemporary architects and with reference to a wide range of sources from history, philosophy, sociology and anthropology, as well as studies in diverse subjects such as science fiction, colonialism and archaeology, the text provides a new perspective on much of the thinking behind contemporary design. In addition, it develops original and practical theories on the meanings of modernity, the variable ageing of the environment, the central role of longevity in sustainability, the significance of authenticity in conservation, and the relationship between collective memory and tradition.

The Icon Project argues that the transnational capitalist class mobilizes two forms of iconic architecture – unique icons recognized as works of art, notably designed by global architects (such as Frank Gehry and Zaha Hadid); and typical icons copying elements of unique icons – to promote the same ideological message: the culture-ideology of consumerism.
