Florida was the first region of the United States to be discovered, explored, and, after a fashion, settled by Euroamericans. Its population in the early 21st century is approaching 17 million. Within years the number of people living in the state will surpass those living in New York, and the Sunshine State will become the most populous area east of the Mississippi. The first book in English about Florida was written by Jean Ribault. A French adventurer, Ribault established a colony of Huguenots near present-day Jacksonville. He was captured by the very able Spanish commander Pedro Menendez, who ordered his French rival and all his minions killed. The state's long and colorful past is matched by its equally long and colorful literary production. Strangely, critical assessment of Florida literature has lagged far behind. With this volume, the Florida College English Association has formally begun an effort to correct this lamentable oversight. Included are papers on every aspect of Florida literature and history by scholars from every part of the state who are employed in every kind of institution of higher learning. Of special interest are the studies of Florida literature in the 19th century and in the late 20th and early 21st centuries, areas that are generally ignored in national journals. The papers on the contributions of African-American literary figures, such as Zora Hurston and James Weldon Johnson, are noteworthy. Of particular interest are the suggestions for teaching Florida studies in the classroom, which can be adapted for high school as well as college students.

Jupiter's Travels -Ted Simon's astonishing 4 year motorbike journey around the world The book that inspired Ewan McGregor's Long Way Round In the late 1970s Ted Simon set off on a Triumph and rode 63,000 miles over four years through fifty-four countries in a journey that took him around the world. Through breakdowns, prison, war, revolutions, disasters and a Californian commune, he travelled into the depths of fear and reached the heights of euphoria. He met astonishing people and was treated as a spy, a welcome stranger and even a god. For Simon the trip became a journey into

his own soul, and for many others - including bikers Charley Boorman and Ewan McGregor - it provides an inspiration they will never forget. This classic text, which has informed a whole genre of travel writing in the thirty years since it was first published, will never be bettered for sheer adventure, passion, humour and honesty. Brought up in England by a German mother and a Romanian father, Ted Simon found himself impelled by an insatiable desire to explore the world. It led him to abandon an early scientific career in favour of journalism, and he has worked for several newspapers and magazines on Fleet Street and elsewhere. Ted Simon is also the author of *Riding Home* and *The Gypsy in Me*.

Drug discovery is all about finding small molecules that interact in a desired way with larger molecules, namely proteins and other macromolecules in the human body. If the three-dimensional structures of both the small and large molecule are known, their interaction can be tested by computer simulation with a reasonable degree of accuracy. Alternatively, if active ligands are already available, molecular similarity searches can be used to find new molecules. This virtual screening can even be applied to compounds that have yet to be synthesized, as opposed to "real" screening that requires cost- and labor-intensive laboratory testing with previously synthesized drug compounds. Unique in its focus on the end user, this is a real "how to" book that does not presuppose prior experience in virtual screening or a background in computational chemistry. It is both a desktop reference and practical guide to virtual screening applications in drug discovery, offering a comprehensive and up-to-date overview. Clearly divided into four major sections, the first provides a detailed description of the methods required for and applied in virtual screening, while the second discusses the most important challenges in order to improve the impact and success of this technique. The third and fourth, practical parts contain practical guidelines and several case studies covering the most important scenarios for new drug discovery, accompanied by general guidelines for the entire workflow of virtual screening studies. Throughout the text, medicinal chemists from academia, as well as from large and small pharmaceutical companies report on their experience and pass on priceless practical advice on how to make best use of these powerful methods.
