Hardbound. Until this century, there was no scientific method for developing and testing agents for the

treatment of epilepsy. Physicians would often, from analogy to other conditions, try remedies which appeared to affect systems thought to be important in the onset of seizures. The many developments and treatment concepts in epilepsy research in the last half-century have

culminated in the short reign of popularity of monotherapy. Monotherapy is now being challenged by rational polypharmacy, based on the theory that two or more antiepileptic agents with different mechanisms of action may be more beneficial. This volume addresses

areas in which monotherapy may be made more rational, and proposes that rational polypharmacy is the natural extension of rational monotherapy. Numerous issues are explored which need further delineation with a goal of a comprehensive antiepileptic drug

Thinking of the text from the Dies frae (S. Matthew, XXV, 40). It is also probable that this other Saint Francis,

partly out of admiration for his illustrious compatriot of Assisi and partly from a compelling urge to be superlative in all things, chose the title in opposition to the Franciscans, the Fratres Minori, I who had previously adopted this style taken from Saint Matthew, XXIII, 8. The title "Minim"

France is in a fragment preserved in

All anesthesiologists are confronted

with patients who show bleeding disorders, whether congenital, acquired, or pharmacologically induced. Although many studies, meta-analyses, guidelines, and textbooks have been published on the subject, they mostly cover specific aspects or require a thorough knowledge of

hemostasis. The goal of this book is to provide the anesthesiologist with an overview of hemostasis and the mechanisms underlying bleeding and coagulation in general and to assist in the understanding of specific coagulation disorders as they may occur in the various anesthesia

subspecialties. It is hoped that, through the provision of practical information and tools, the book will help residents and trained anesthesiologists to manage one of the most frustrating challenges that they face: the bleeding patient. A full understanding of coagulation requires

a lifelong career, and this book is not intended to replace the consulting hematologist, whose expert opinion should always be sought. The available procoagulant blood products and drugs all have potentially dangerous side-effects; furthermore, in bleeding disorders pitfalls are

frequent and a misdiagnosis can have potentially catastrophic consequences. The aim of the editors is thus instead to enhance the collaboration between the disciplines of Anesthesiology and Hematology.
